

Official Dice Throne Rulings and Clarifications

This is a living document, meaning it will be changed and improved as we continue to grow. Always refer back to this document for the most up-to-date information. Note that there are multiple types of Headers and a Table of Contents to navigate it easier.

Advanced DT Rules Doc

WHAT is this?

This document includes:

1. More in-depth and detailed discussions of concepts and rules already in the Dice Throne rulebook.
2. Additional rules and clarifications above and beyond each Hero's rules clarifications on the back of their leaflet.
3. A comprehensive list of all official rulings made in Facebook and in Discord throughout the various channels of the Official Dice Throne server.

If you are new to Dice Throne, I strongly recommend that you **DO NOT READ this document**. A lot of the information and discussion in here is above and beyond the Dice Throne rulebook, which is still an excellent resource that will answer most of your questions.

WHEN to use this?

This document should be used as a **final resource** to answer questions for both

- a. Organized Play and tournament settings.
- b. Rules questions that you cannot find the answer to elsewhere (see below).

Before using this document, you should first review the following (in order):

1. The original Dice Throne rulebook
2. The "Rules Clarifications" on the back of your Hero leaflet
 - a. This does not count if your leaflet is labeled "Frequently Asked Questions"
3. The rules in dice-throne.rulepop.com
 - a. This site includes all updated "Rules Clarifications" on the new leaflet so these are official to use, as well!

WHO made this?

This official rules document is maintained by John Heidrich, the Lead Officiant for Dice Throne.

Even though I have only been an employee of Dice Throne since May 2024, I was directly involved and responsible with creating all of the “Rules Clarifications” for all Heroes that have ever been released, including updating the previous “Frequently Asked Questions” back of leaflet sections for Season 1 and Season 2.

Therefore, all of the rulings that are on the “Rules Clarifications” on the back of your Hero leaflet can also be treated as official rulings made by me!

Special thanks to Nate Shetler for maintaining the previous iteration of the pedant rules documents. Also thank you to all community members across all platforms who answer rules questions and clarifications each day.

HOW to use this?

If a question relates to a specific outcome between two Heroes, the question will** be recorded based on the following criteria for priority:

1. The Hero who has the specific status effect,
2. The Hero whose Ability is being activated

***if not in this order, look in the other section*

Feel free to either

- a. Make suggestions directly on the document (typos, word missing, etc)
 - b. highlight and leave a “comment” on any sections if you have a quick question or issue that you think could be added to this document.
- I will check this document weekly.

If the answer is not in this document, or you have a more robust question or issue to address that is too big for a comment text box, please send an email to dice-throne@rulepop.com

1. General Concepts

Golden Rules of DT

1. Nothing can be done by your opponent(s) after you have successfully activated your *Ultimate Ability*.
2. Rolled dice can always be altered by the other player, **except** during an *Ultimate*.
3. Any instance of damage can always be prevented or avoided with *Phase*-applicable cards, status effects or abilities, **except** during an *Ultimate*.
4. Damage is always accumulated and applied simultaneously at the conclusion of the *Phase* that you are in, **unless** the damage is an isolated source of undefendable dmg (and is resolved immediately in the middle of the *Phase*).
5. There is no “playing chicken” or going back in time after both players have agreed to progress the order of play.

Errata to Hero Components

Back of the Heroes Rules Clarifications

Note: The rulepop website (dice-throne.rulepop.com) should be updated with these changes.

(formatted as) **Hero:** Title of section in Rules Clarification: Explanation of change.

Barbarian: Thick Skin II: rules for the exact timing of Healing has changed. Healing now occurs right away instead of being accumulated with all other forms of damage and applied simultaneously at the conclusion of the Roll Phase.

Ninja: Kuji-Kuri: This ability's damage type should be collateral.

- This matters for Marvel DT Missions (you do not need Range for the ability).

Treant: Natures Grasp clarification: Currently the answer reads “Damage is dealt based upon the number of Spirits you had when the ability was activated.”

- It should read “If you spend a Spirit during your *Attack*, the damage is not lowered (since the damage being dealt is based upon the number of Spirits you have immediately after resolving the ability, including growing the 2 Spirits).

Samurai: Shame: Reduces damage from normal and undefendable dmg (and not pure or collateral or Ultimate dmg).

Tactician: Profiteer: Older leaflet versions have a Rules Clarification concerning when Blind and Blinding Light resolve is no longer valid due to slight adjustment to wording to Blind and Blinding Light.

Cursed Pirate: Wither: Wither does affect normal or undefendable dmg. Wither does NOT affect pure or collateral or Ultimate dmg.

Cursed Pirate: FAQ 4: If an opponent fails their Blinding Light or Blind status effect roll, their Attack is considered to have failed, and they would receive a Powder Keg from the Cursed Passive Ability

Artificer: Heal Bot: rules for the exact timing of Healing has changed. Heal Bot healings now occurs right away instead of being accumulated with all other forms of damage and applied simultaneously at the conclusion of the Roll Phase.

Krampus: Bitey: rules for the exact timing of Healing has changed. Healing now occurs right away instead of being accumulated with all other forms of damage and applied simultaneously at the conclusion of the Roll Phase.

Black Widow: Ultimate/ Recon Abilities: You must shuffle your deck first after you search your deck for Ability Upgrade cards. The standard rule regarding the word “then” for these abilities should be ignored (i.e. you cannot play cards such as Double Up! at the point of “then”).

Cyclops: Leadership cards: Paragraph 2 should instead read “Never Let Go (Leadership card) may →**not**← be played WITHOUT discarding a Support and Battle Plan. Next sentence ignored, as well.

- You must have the prerequisite tokens in order to play the card. Not enforcing this rule, means that many other cards become unclear (including that you need incoming dmg in order to play a card that prevents incoming dmg)

Status Effect Descriptions

Gunslinger: Reload: Wording changed from "If a player concludes their Offensive Roll Phase with an Attack..." to "After Attacking, a player with this token may spend it and roll 1 die..."

- avoids the odd timing issue that you could only spend Reload at one specific point in time (when a player concludes their Offensive Roll Phase with an Attack) instead of at any time after an Attack is activated.

Scarlet Witch: Crackle: Wording changed from "If a player concludes their Offensive Roll Phase with an Attack..." to "After Attacking, a player with this token may spend it..."

- avoids the odd timing issue that you could only spend Crackle at one specific point in time (when a player concludes their Offensive Roll Phase with an Attack) instead of at any time after an Attack is activated.
- This ruling is already clarified on the back of her leaflet under “Spending Crackle” which tells you exactly when you can spend Crackle during your turn.
- A bonus error is that Crackle incorrectly gives “Spellbound” as an example of a Positive or Negative Status effect that would add 1 dmg for a spent Crackle. Spellbound should not have been used as an example, as Spellbound is a Unique Status Effect.

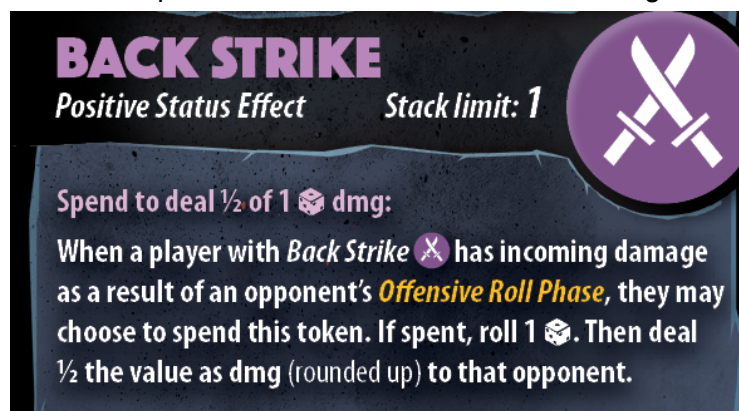

Status Effect - Additional Wording Changes

The wording for the status effects Back Strike, Blind, and Evasive and Smoke Bomb will be updated on future printings to more clearly align with the actual intent and usage of the status effect. These status effect wording changes are summarized below:

Back Strike: Wording now aligns with the actual intent of when it can be used.

1. This was done to clarify that it can be spent at any point after dmg is considered to be incoming instead of only being able to be spent AFTER the Samurai or token holder has actually received dmg.

2. This has not been the intent for this status effect, as this timing would mean that after dmg has been accumulated and dealt to both players, THEN ONLY AFTER this happens would you be able to spend this, and now deal 1/2 die of dmg back to the Attacker.

Locations: Samurai leaflet (Season 2), Dice Throne Adventures, Marvel Dice Throne Missions

Blind: Wording now aligns with the actual intent of when it can be used.

1. The point of time when it is activated is specifically at the very start of ORP, Step 4, before the Ability's variable effects are determined (i.e. before rolling 5 dice if you activate the Moon Elf's "Exploding Arrow" ability).
2. This adjustment aligns with the actual intent of the status effect (as in, did the Moon Elf's last Ability successfully Blind your Hero or not? Well, let us see if you roll an Attack, then check the status effect and on a 1-2, YES you were Blinded! Awe...).
3. Previously it was unclear whether you should roll the Ability's variable effects (as noted above), but then roll for Blind and then realize your Attack has failed...
4. It is also further clarified that it is still removed if the ORP concludes without an Attack or any Offensive Ability (i.e. whiffing your turn), which is a very common question with this status effect.

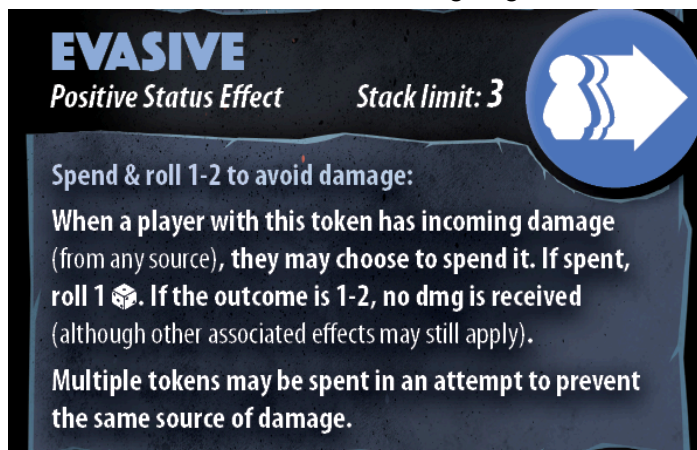

Note that points 1-4 above also apply to the status effect Blinding Light.

Locations: Moon Elf leaflet (Season 1), Dice Throne Adventures, Marvel Dice Throne Missions

Evasive: Wording now aligns with the actual intent of when it can be used.

1. This was done to clarify that it can be spent at any point after dmg is considered to be incoming instead of only being able to be spent AFTER the token holder has actually received dmg.
2. This has never been the intent nor how Evasive has been spent in Dice Throne, as this timing would break a Golden Rule of no “going back in time” and reversing already-received damage.

Locations: Moon Elf leaflet (Season 1), Gunslinger leaflet (Season 2), Dice Throne Adventures, Marvel Dice Throne Missions

Smoke Bomb: Exactly the same wording change as Evasive (see above).

Locations: Ninja leaflet (Season 1)

Hero Board

Artificer: The keyword “then” is used incorrectly in the following Offensive Abilities: Zapppp!, Overclock, Maximum Power.

- The word “then” does not mean that the “Activate any one Bot” portion of the Offensive Ability occurs after damage calculation (which is what the word “then” is supposed to do).
 - You are able to Activate any one Bot (e.g. Shock Bot) and it will affect the Offensive Ability’s Attack damage.

Vampire Lord: The keyword “then” is used incorrectly on old versions of the “Rend” Offensive Ability.

- You should roll the dice for Rend before dmg is dealt from the Attack.

Cards

One More Time! Roll Phase card: This card should be played as “A chosen player may perform an additional *Roll Attempt* of up to five dice during their *Offensive Roll Phase*.”

- Early printings of the One More Time! card read “a chosen player may perform a re-roll of up to five dice during their *Offensive Roll Phase*.” The intent was to only affect the dice that are being rolled before activating an Offensive Ability.

Better D! Roll Phase card: This card should be played as “A chosen player may perform an additional *Roll Attempt* of up to five dice during their *Defensive Roll Phase*.”

- Early printings of the Better D! card read “a chosen player may perform a re-roll of up to five dice during their *Defensive Roll Phase*.” The intent was to only be the dice rolled when activating a Defensive Ability.

Cards

1. Interaction Name: Looking at cards on top of your deck

Situation: What happens if an effect tells you to “look at the top 5 cards of your deck” but you have less than 5 cards in your deck? Should you shuffle your deck first?

Ruling: You can only look at the remaining cards in your deck. You cannot shuffle your deck or re-shuffle your deck when performing the “look at the top 5 cards of your deck” effect.

Explanation: 1. You are only able to perform the effect with the remaining components that you have available

2. If your deck only has i.e. 3 cards remaining, you will only be able to look at these 3 cards.

3. Your deck should ONLY ever be shuffled when you need to draw a card, but your deck is empty. At this point, you shuffle your Discard Pile to create a new deck first.

4. In the specific example of activating Doctor Strange's Ultimate, you can only look at the remaining cards in your deck.

The only other Heroes with this type of effect are Black Widow and Cyclops.

Location: Discord-General Rules

Ruling Date: 8/23/2024

2. Interaction Name: Retargeting status effect removal cards

Situation: Can you retarget a status removal effect even if not all the targeted status effects have been removed?

Ruling: Yes

Explanation: For example, let's say Tactician has 3 Tactical Advantage and Protect and I play What Status Effects targeting him. If he responds by spending 3 TA to draw a card, the other player can then target themselves instead, to remove a Targeted or Constrict status effect on themselves.

Location: Discord-General rules

Ruling Date: 9/30/2024

3. Interaction Name: Spending cards before CP is stolen/ cards discarded.

Situation: Can I play “Not This Time!” (NTT) before my CP is stolen or the card may be discarded from an opponents Offensive Ability effect?

Ruling: Yes, cards can be played before a CP is stolen or a card is discarded.

Explanation:

1. The card Not This Time specifically reads "A chosen player prevents 6 incoming dmg".

2. Damage is not incoming until after the Targeting Roll Phase. (see 13. Cursed Pirate ruling 2)
3. NTT may be played during DRP 1 before the effects requiring a Target are resolved (such as discarding or losing CP).

UPDATE:

4. Another example would be the Shadow Thief's Main Phase Action card "Card trick!"
5. When resolving the cards effect, if the randomly discarded card would be the opponent's "Double Up!", the card Double Up! cannot be played in response. The reason for this is that the card has been selected and revealed (this is a different interaction than CP being stolen)
6. Note that when the Shadow Thief announced that they were going to play "Card Trick!", you could have interrupted at that point in time and played Double Up! (before the randomly discarding effect occurs at all)

Location: Discord-Cursed Pirate

Ruling Date: 10/10/2024 (update 03/06/2025)

4. Interaction Name: Upgrading from Level II to Level III

Situation: Can you play a level III upgrade on top of a level II upgrade?

Ruling: Yes

Explanation:

1. Per the rulebook, you place a level III Hero Upgrade directly on top of the level II Hero Upgrade when played.
2. The level II Hero Upgrade is not placed into the Discard Pile.
3. You cannot play a lvl II Hero Upgrade on top of a lvl III Hero Upgrade.

Location: Discord-none

Ruling Date: 10/23/2024

5. Interaction Name: Try, Try Again card

Situation: How exactly can you roll these two dice?

Ruling: See below

Explanation:

1. Per the bottom text written on the card, you have two options that you can do. You
 - a. "can [Roll] the same die twice in a row or
 - b. two different dice."
2. This helper text is to help remind a player the options available to them.
3. These two options mean that you can
 - Pick up two dice and re-roll them right away (option 1b above)
 - Pick up one die, re-roll it, and then choose either to re-roll this one die a second time (which is option 1a above) or choose a second die and re-roll it (which is option 1b above)
 - Update: If you only roll one die and accept the result, you cannot "save" this second "Try" for later. If your dice are altered afterwards, you cannot use the second re-roll.

Location: Discord-base game rules discussions

Ruling Date: 03/13/2025 (update 2025/05/12)

6. Interaction Name: Twice as Wild card

Situation: This card reads “Change the values of any two dice”. Can I change just 1 dice? What about changing two different dice rolled by different players?

Ruling: Yes.

Explanation:

1. Yes, you can use the card Twice as Wild on only 1 die.
2. Examples for changing different dice include dice being rolled at the same time for the same purpose.

Examples:

- 1. When two players are engaged in a rolloff occurring during the Roll Phase, Twice as Wild may be used to change both dice. Some examples include Gunslinger’s “Showdown” and “Duel” abilities, Santa’s “Fireside Chat” ability, and status effects like Skyward and Alpha.
- 2. In Marvel Dice Throne Missions, if players are in the same part of the Roll Phase, one of those players may use Twice as Wild to change one die for one player, and another die for another player. For instance, if all three heroes are simultaneously performing roll attempts to activate Offensive Abilities, Captain Marvel could use Twice as Wild to change one of Rogue’s dice and one of Pyromancer’s dice.

Location: Discord-base game rules discussions

Ruling Date: 01/06/2026

7. Interaction Name: When Attacked or Play only after being Attacked cards

Situation: When exactly can I play a card with the words on it reading “When Attacked” or “Play only after being Attacked”

Ruling: After you have been successfully targeted by an Attack

Explanation:

1. These cards can only be played during the Defender’s Defensive Roll Phase, after they have been targeted by an opponent’s Attack.
2. Note that any dmg prevention from these cards would only prevent the incoming dmg that is added to the Final Dmg Total that is done at the normal point in time at the end of the Roll Phase.

2b. This means that they cannot be used to prevent any sources of isolated dmg (such as Thor’s Mjolnir or Thor’s Chain Lightning Offensive Ability)

Note: Effects like the Monk’s Chi or the card Not This Time (prevent 6 incoming dmg) can be used on any type of not-an-Ultimate incoming dmg.

Location: Discord-base game rules discussions

Ruling Date: 3/30/2026

8. Interaction Name: Modifying dice

Situation: Can a card that alters a die (like So Wild) that changes a die to any value, be used to change the die to the value it is already?

Ruling: Yes

Explanation:

1. If you roll a 6, and then play So Wild, you can certainly just change it to a 6.
- 1b. There is no reason why you would ever want to do this in a standard game, but a better example may be if you played the card Twice as Wild (which changes 2 dice to any value) and

you only want to change 1 of your dice. So in effect, you can change 1 die, and then change a second die to the exact same value.

I would stress that this scenario is a very extreme edge case and will likely never come up in a standard game of Dice Throne

Location: Discord-ninja

Ruling Date: 4/7/2026

Combat Points

Maximum CP Limit

1. If you already have 15CP at the start of your *Income Phase*, you could play an Instant Action card (such as Double Up!) to interrupt the typical gaining of 1CP.
2. Your CP would be reduced by 1CP to 14CP.
3. You would now be able to gain the usual 1CP that is gained during the *Income Phase*, going back to 15CP.

NOTE: Gaining 1CP during your *Income Phase* occurs **before** you draw 1 card.

Dice Rolling

1. Interaction Name: General Dice rolling and modifying

Situation: Dice are rolled. At what point can you no longer mod the dice?

Ruling: Once both players have agreed to the outcome of the dice.

Explanation:

1. You both have to mutually agree to move forward.
2. Whenever a die is rolled in DT, both players can adjust that die with cards, if the card is playable in the current phase.
3. That has to logically start with the player who rolled the die. They are free to modify and re-roll their dice up until the point they are ready to present them to their opponent.
4. At this point of presenting their dice results, then the opponent has an opportunity to respond.
5. If they choose not to, they're accepting that die outcome.
6. There is NO going backwards in time once both players accept a die outcome.

Location: N/A

Ruling Date: 11/28/2024

2. Interaction Name: Dice numbers and symbols

Situation: Dice are rolled. Can I use both the numbers and the symbols? Do I have to use just one?

Ruling: Numbers and symbols cannot be separated; they are one and the same.

Explanation:

1. You can use both the symbols and the numbers on dice when resolving Abilities
 - 2a. For example, you can utilize both 5-Swords to deal 10 dmg for the Barbarians Smack III ability while also simultaneously utilizing four-number-3's on these dice to make the Attack undefendable.

2b. Also for the Paladin's Tithe II Passive Ability, you can both utilize the numbers on the dice to activate his Straights Ability (using numbers) while also being able to activate this Passive Ability which requires "utilizing a [prayer symbol] on an Offensive Ability."

Location: N/A

Ruling Date: 2/7/2025

3. Interaction Name: Re-rolling a die or dice

Situation: How exactly does re-rolling a die or dice work? How about the card Try, Try Again which has brackets at the end of it?

Ruling: Try, Try Again is a special instance of re-rolling; all other forms of multiple die rolling must occur all at once.

Explanation:

1a. The dictionary definition of "re-roll" is to "roll something again".

1b. The Roll Phase Action card Try, Try Again states that "you may re-roll up to two dice." This is open to interpretation, which is why instead of explaining elsewhere how to resolve this card, it has this helper reference text to explain exactly how it works.

1c. The different ways to roll this card's effect are as follows:

A) Roll one die.

B) Roll one die, and then roll it again.

The above two options are captured in the "can be the same die twice" explanation

C) Roll two dice at once.

D) Roll one die then roll another die.

The above two options are captured in the "or two different dice" explanation

1d. The original and continued intent and rationale behind this card is that it lets you "Try once, and then Try a second time" as effectively two instances of "trying again" to roll what you want.

1e. This means you can re-roll your Evasive status effect once or twice to avoid damage (Option A or B), or just pick up two of your Defense dice and try to deal a couple more dmg back to your Attacker (Option C), or roll your 4th die to get you to 4-sixes, and then now roll that final 5th die into another 6 for your Ultimate (Option D),

Note: A new similar card released with X-Men is Storm's Roll Phase Action card Tsunami. It also has helper text to explain how it works, and is effectively the same as Try, Try Again, except you can "try" a third time!

2a. ALL other instances of re-rolling multiple dice at once, must be from the dice currently on the table.

2b. This follows the dictionary definition of the word re-roll, and is also further clarified by the language stating "...re-roll up to [#] of **these dice**".

2c. **these dice** does not mean that you can roll one die, and then re-roll either the new die result or a different die (Option B or D above), because this second result is not one of the initial "these dice" outcomes.

2d. Examples of this is the Ninja's Defense Upgrade Shade Shift II. You can re-roll two of these three dice, but you cannot choose just one die, and then re-roll that same die again. Same for Throwing Stars card (up to 5 of these dice means 0, 1, 2, 3, 4, or 5 of these dice which are not currently [Shuriken symbols]).

3. A final note, there are many effects and abilities that allow a “re-roll of 1 of your dice”. These resolve one at a time, so you can choose to re-roll the same die over again so long as you have the CP/ status effect tokens to do so.

Location: Discord-base game rules discussions

Ruling Date: 03/18/2025

Hero Leaflet

All Hero Setup instructions are now on the front of each Hero Leaflet.

Hero Setup: In older versions, Hero Setup was printed on the back of the leaflet. Also, in some versions of Marvel Dice Throne, Hero Setup was located in leaflet entries or in Passive Abilities. Check there if you have an older copy of Dice Throne.

Status Effects

Note: Companions are treated the same as status effects in regards to their timing and being interrupted/ any timing conflicts.

The quick-reference sentence at the very start of each status effect is helpful to quickly explain what the status effect does. When trying to determine rules or figure out an interaction or resolve a timing question or similar, use the full status effect description wording.

Spending a status effect: Unless otherwise noted, you can spend multiple instances of status effects during the same turn. For example, you can spend multiple Evasive status effect tokens to avoid the same instance of incoming damage.

Persistent: means that the status effect can only ever be removed by some status effect removal card (like Get That Outta Here!) or similar effect (like the status effect Cleanse).

Status effect tokens that are removed at the beginning of the *Offensive Roll Phase*:

1. Reality Warp
2. Influence

Status effect tokens that are removed at the end of the *Offensive Roll Phase*:

1. Blind (actually removes at ability activation or if afflicted player whiffs)
2. Blinding Light (actually removes at ability activation or if afflicted player whiffs)
3. Spellbound

Status effect tokens that are removed at the end of *Roll Phase* (per status effect description):

1. Stun
2. Constrict
3. Crimson Bands (removes at the end of the opponent next *Roll Phase*)

4. Entangle
5. Parlay
6. Paralyze
7. Dice Cube
8. Decrep-ify

Removing a status effect:

- If an effect tells you to “remove a status effect,” this means that you just have to remove one single token/ one piece of cardboard.
- Per the “removing status effects” section of the rulebook, if an ability or card tells you to “remove X (number) of status effects” you **MUST** remove that many status effect tokens.
 - If one player has X status effects and the other has zero status effects, you can choose the player who has zero status effects, and the card effect will remove zero status effects from that chosen player.
- This does not mean you remove all status effects of the type.
 - For example, a Moon Elf has 3 Evasive tokens.
 - Removing a status effect means you remove 1 single Evasive, and not all 3 Evasive tokens.
- Note: You cannot remove a status effect after rolling for it.
 - i.e. you cannot roll your “Blind” status effect die, roll a 1-2, and then try to play the Instant Action card “Buh Bye!”
- If a status effect token is removed at the end of the Roll Phase, but the Roll Phase is skipped entirely (i.e. the status effect Knockdown), the status effect token is not removed since a Roll Phase did not occur at all!

Key Terms

Additionally:

1. This keyword and “Then” have almost identical definitions in the Quick Reference guide on the back of the rulebook.
2. However, the word “additionally” does not function the same as the keyword “then”.
3. The usage of this keyword “additionally” is just supposed to have the user read and perform the effect in addition to the effect that is before the word “additionally”.
 - This is inline with the dictionary definition of the word being “in addition to/ furthermore”
4. Again, this is different from the keyword “then”, which has a robust explanation below.

Damage:

1. All of these terms: “incoming dmg”, “receive dmg”, “deal dmg”, and “dealt dmg” are basically interchangeable. They are just used based on the sentence structure. They all mean that dmg is directed towards a certain player.
2. “Dmg successfully dealt” is a term that specifically indicates the Health Dial must essentially “move” for the effect to happen.
 - a. See “List of Damage Dealt Successfully Effects” section for a complete list.
3. Damage that occurs outside of an *Attack* (i.e. via a status effect or a *Defensive Ability*) does not have a damage type. That damage can be avoided, but is not modifiable or defendable (i.e. you cannot use an *Attack Modifier* to modify it or use a *Defensive Ability* against it).

Distribute:

1. can gain or inflict these status effects in any order.
 - For example, Loki’s Offensive Ability Liar’s Gifts reads “Distribute up to 3 Bags of Tricks in any way desired.”
 - This means that he can gain 2/inflict 1, or gain 1/inflict 2, or inflict 3 (if he has more than 1 opponent OR wants to inflict all on one opponent and go over Stack Limit) or gain 3 (if he has another teammate OR if he wants to gain all 3 himself and go over Stack Limit).

Healing: See section under 2. Turn Order - Roll Phase

Roll Attempt:

1. A dice roll performed by the player to activate an *Offensive* or a *Defensive Ability*.
2. If you are able to perform one more *Offensive Roll Phase Roll Attempt*, you may roll any number of your dice one additional time (i.e. a fourth time).
3. If you are able to perform one more *Defensive Roll Phase Roll Attempt*, you may roll any number of your dice one additional time (i.e. a second time).
 - a. This does **not** mean that you are able to activate the effects of your Defense a second time.
 - b. This does mean that you can roll any number of dice to try and activate the various effects of your Defense .
 - i. i.e. For the Barbarian’s Thick Skin Defensive Ability, you can keep 1 rolled “Heart” symbol and then roll the other two dice again to try and roll more “Heart” symbols to Heal 2 per “Heart” rolled.

Stack Limit: When a Heroes status effect Stack Limit is increased, they should create a single stack of tokens on their Hero Leaflet with the exact number of “new Stack Limit” tokens. Any remaining tokens should be set aside or returned to their Hero tray.

Steal: Stealing Health does not count as dealing dmg.

In rare circumstances, a Steal effect may reduce an opponent’s Health to zero before the usual simultaneously damage calculations occur at the end of the *Phase*. In this instance, that opponent is defeated before their damage has been dealt.

If an effect causes you to Steal health or CP, but you are already at maximum +10 health over or at 15 CP, you can still Steal from the opponent (they lose the health or CP) even though you cannot gain anymore health or CP.

Transfer

1. Counts as gaining or inflicting a status effect.
 - a. i.e transferring an Evasive status effect token from your opponent to yourself counts as if you are gaining Evasive.
 - i. This matters for some Hero ability and status effect interactions.

Then: Clarifications of the keyword “then”. Below is a list of the various usages and ways that the word “then” is presented in the game of Dice Throne.

Page 9: Resolving Text section definition: “Then” statements create a break in play during which players may play Instant Action cards, Roll Phase Action cards, or spend Status Effects. Statements following a “Then” are always resolved after the statements preceding the “Then”.

Page 16: Quick Reference section definition: You may spend status effects and play Instant Action cards or Roll Phase Action cards at the point of a “Then” statement. The effect following a “Then” statement is performed after the effects that came before it.

- 1a. In the game of Dice Throne, the majority of Heroes do not have the word “then” in their Offensive Ability description at all, because it is not needed (see Entangling Shot example).
- 1b. At any point during the Roll Phase after an Offensive Ability has been successfully activated, you may play an Attack Modifier (such as the Moon Elf’s Roll Phase Action card Take That!)

- 2a. “Then” may be used in an Offensive Ability description when inflicting status effects to help clarify that there is a break in play, in order for you or an opponent to “spend status effects and play Instant Actions” (see Eclipse example).
- 2b. At the point of “then”, an opponent could play the Instant Action card Buh Bye and remove the Targeted status effect, meaning that the opponent will not receive the +2 Attack dmg effect from Targeted.
- 2bb. Some confusion exists regarding this specific interaction, as it does not matter whether Targeted is removed at the point of “then” (during the ORP step 4) or just prior to the Attack dmg

being dealt (DRP step 5). If Targeted is removed at either time, the Moon Elf's opponent **will not receive the +2 dmg from Targeted**.

3. “Then” may be used in an Offensive Ability description when gaining status effects to help clarify that there is a break in play, in order for you or an opponent to “spend status effects and play Instant Actions” (see Budo, Maneuver and Nature’s Grasp example).

3a. Budo creates a break to help clarify that you can spend Honor at the point of “then” (to add extra dmg).

3aa. You can spend the Honor at this point (ORP step 4) or any other point up to just prior to the Attack dmg being dealt (DRP step 5). You can also spend any previously-held Honor prior to gaining this new Budo Honor, as spending status effects is considered an Instant Action.

3b. Maneuver creates a break to help clarify that you can spend Tactical Advantage at the point of “then” (to add extra dmg).

3bb. You can spend Tactical Advantage at this point (ORP step 4) or any other point up to just prior to the Attack dmg being dealt (DRP step 5) for its effects, such as spending 3 to inflict Targeted. You can also spend any previously-held Tactical Advantage prior to gaining this new Maneuver Tactical Advantage, as spending status effects is considered an Instant Action.

3c. Nature’s Grasp creates a break to help clarify that the grown Spirits **will count** towards the “+1 dmg per Spirit” effect that is written after the “grow 2 Spirits” effect.

3cc. You can spend any Spirits after resolving the effects of the effect “deal 5 + 1 dmg per Spirit” (after the ORP step 4) or any other point up to just prior to the Attack dmg being dealt (DRP step 5) for its effects, and the added dmg will not change. Without the “then”, there may be confusion by players as to whether these newly-grown Spirits count towards the “+1 dmg per Spirit” or not, so “then” is very helpful for these types of effects.

Note to #2 and #3: As you can see, the “then” is not necessarily needed, but it is used to help clarify the timing for players and help them recognize that there is a break in play that Actions can be performed. Specifically for 3a and 3b, you can still spend these status effects at other points in time during the Roll Phase.

4a. The most important use of “then” is when it is located after a “deal dmg” description (see Fist of Harmony, Righteous Prayer and Ensnare examples).

4b. As noted in the “then” description, the effects following a “then” statement are performed ****after**** the effects that came before it.

4c. This only occurs for a few select Heroes, but the three examples above are the most common examples of “then” being used differently than usual.

4d. In the first two examples, the 2 Chi or the Crit and 2 CP are resolved and gained ****after**** dmg has been dealt.

- this was to further clarify that the 2 Chi may not be used to increase the dmg for Fist of Harmony **and** that the Chi cannot be used against return damage from the opponent's defensive ability (which is also spelled out directly in the Chi status effect description).

- this was to clarify that Crit may not be used to increase the dmg for Righteous Prayer (as otherwise we could have just said “deal 12 dmg and gain 2 CP.”)

4e. In the third example, the inflicted Webbed is resolved ****after**** dmg has been dealt.

- this was to further clarify that the 5 dmg Attack is not affected by the Webbed status effect (as otherwise we could have just said “deal 5 undefendable dmg.”)

- this also means that the 2 isolated dmg occurs after the usual damage calculation step.

Hopefully this helps everyone understand exactly why “then” exists and is such an important keyword in Dice Throne!

Comprehensive list of “then” examples where the use of the keyword “then” affects the Ability and state of play in a way that is different than normal

Monk: Chi is gained after dmg calculations for the following Offensive Abilities:

1. Fist of Harmony,
2. Fist of Tranquility,
3. Lotus Strike,
4. Transcendence,
5. Zen Strike, and
6. Way of the Lotus.

Paladin: Righteous Prayer: Crit status effect (and the 2CP) is gained after dmg calculation, meaning it cannot be used on the initial 8 defendable dmg of the Attack.

Mighty Prayer: Crit and Accuracy status effect is gained after dmg calculation.

Artificer: As noted in the errata, the “then” in is used incorrectly in the following Offensive Abilities: Zapppp!, Overclock, Maximum Power.

- The word “then” does not mean that the “Activate any one Bot” portion of the Offensive Ability occurs after damage calculation (which is what the word “then” is supposed to do).
- You are able to Activate any one Bot (e.g. Shock Bot) and it will affect the Offensive Ability’s Attack damage.

Miles Morales: Spider-Man: Webbed status effect from his Ensnare Offensive Ability is inflicted after dmg calculation.

- This includes dealing 2 dmg on the updated leaflet effect of “When this token is inflicted deal 2 (dmg) as an isolated source of *undefendable* dmg.”

Doctor Strange: Wand of Watoomb: Written as follows:

- Inflict Crimson Bands.
- Deal 5 undefendable dmg.
- Prepare a *Spell* from your discard pile. Then Cast up to two *Spells*.
 - The “then” noted in the final paragraph is specifically referring to the casting of two Spells occurring **after** the Prepare a Spell reference.
 - Therefore, this “then” does not occur after damage calculations.

Iceman: Frostbite: (also noted in Iceman section): The “then” is a separate and distinct sentence from the “on 4-of-a-kind (#’s), Store 1 Ice Shard in The Freezer”.

- You do not need to successfully roll 4-of-a-kind in order to transfer out of The Freezer.
- You can transfer out of the Freezer after rolling 3/4/5 Ice Symbols for the Ability.
 - You can also use a Glide this same turn when transferred out of the Freezer.

2. Turn Order

Upkeep Phase

All damage is accumulated and applied simultaneously at the conclusion of the Upkeep Phase

- For example, 3 Poison status effects would deal a combined 3 dmg

Healing effects that occur during the Upkeep Phase would now occur immediately instead of being accumulated with other forms of damage (see 'Update to Healing effects' under Roll Phase below for detailed explanation).

Income Phase

1. The order of resolution is specifically
 - a. Gain 1 CP, then
 - b. Draw 1 card

Main Phase

Roll Phase

1. Interaction Name: Healing during the Roll Phase

Situation: When exactly is my Heroes healing effect supposed to resolve? The rulebook gives two examples when healing can occur during both 1) the ORP and 2) the end of the DRP where "finally, all damage, prevention and/or healing effects are accumulated and applied simultaneously".

Ruling: Both are correct.

Explanation:

1a. ORP Healing: The Healing that occurs during this step is **only Offensive Ability effects**.

1b. This occurs during the ORP 4 when you "resolve any effects that do not require a target (e.g. Heal 5)".

1c. These Healing effects occur from an Offensive Ability that also Heals the Hero (i.e. Paladin's Holy Attack straight's ability or an Artificer doing a free Activation of his Heal Bot as well as Doctor Strange's Offensive Ability that Casts a Spell that Heals him, such as Mists of Morpheus).

1d. The reason for this is that this Healing can get lost throughout the various steps of the Roll Phase. For example, imagine that the "FINAL DMG TOTAL" comprehensive example in the rulebook occurred, but the Paladin was the one who Attacked using their Large Straight and Healing 2. This would be difficult to remember after the fact.

2a) This other mention of when healing effects occur includes ****all other effects**** that Heal. This includes effects such as:

i) a Defensive Ability that heals the Hero (i.e. the Barbarian's Defense Thick Skin heals 2 per Heart rolled).

ii) Healing effects from Attack Modifiers (such as Krampus' Bitey Companion).

iii) Healing effects from other sources (such as Artificer's Heal Bot Companion that is being activated after being Attacked, during his Defense).

3a) One exception to the Healing rule is specifically the Huntress' Nyra's Bond status effect.

3b) When it is spent, it Heals Nyra 2 immediately.

3c) This Healing exception is because Nyra is a Companion, that is all.

Additional notes

1) Healing does not have any effect on the final dmg total. This is why there is no Healing occurring in the "FINAL DMG TOTAL" comprehensive example. These other Healing effects are simply netted against damage and prevention effects a.k.a the Final Dmg Total at the end of the Roll Phase.

2) Healing does not reduce incoming dmg. This means it does not affect any status effects that halve dmg (such as the Paladin's Protect) and it should not be included in any addition/ subtraction when trying to determine incoming dmg.

3) Stealing Health, which is not the same as Healing, occurs during the DRP 4 and not during DRP 6.

Update to Healing effects

Ruling: Healing effects now occur "quicker" as a non-damage effect.

Explanation:

1. Currently worded in the rulebook, Healing occurs in two places during the Roll Phase:

a. Healing can occur during the ORP step 4 (i.e. a Paladin's Small Straight heals 1).

b. Healing can also occur during the DRP step 6 (i.e. a Barbarian's Defense that Heals 2 x Heart rolled).

Also, Healing does not have any effect on the final amount of "damage successfully dealt" to a Hero

For example, even if a Barbarian Heals 4 from their Defense, and the Vampire Lord is dealing 8 dmg from their Attack and wants to spend four Blood Power to use their "Heal equal to the amount of dmg successfully dealt" effect, then the Barbarian's Heal 4 Defense has no effect on the amount of dmg successfully dealt, meaning that the Vampire Lord would Heal 8.

Updated ruling for Healing: ****All Healing effects are now considered to be a non-damage effect.****

This changes Healing effects to occur outside of the usual "all damage, prevention and healing effects are accumulated and applied simultaneously at the end of the current Phase".

Positives:

1. It is now more clear that Healing is NOT a part of the incoming dmg total (i.e. the earlier Vampire Lord/ Barbarian's Healing Defense example is more clear)

2. Aligns completely with the Quick Reference description for "Heal" (see image)

3. No change to Healing effects that occurred during the ORP in Step 4 (a Paladin still heals 1 when resolving the effects of their Small Straight ability)

4. Less math! You do not have to figure how much damage a Barbarian receives when he receives 9 dmg minus 6 prevented from Not This Time plus 4 damage added from an Attack modifier minus 4 Healing from his defense. The end result is still the same (his Health Dial will be 3 Health lower than the start of his turn), it is just that the 4 Healing simply happens right away.

Small changes to gameplay:

1. Healing effects that occur during the Upkeep Phase would now occur immediately instead of being accumulated with other forms of damage.

- The end result will still be the same, this change simply affects the timing of effects.

In an example where Deadpool is eating a Donut while also being afflicted with 3 Poison, the ordering changes from

a) Deadpool rolling for the Donut, seeing that he will Heal 2 from the result, accumulating this with the 3 Poison dmg he should receive, and ultimately lowering his Health Dial by 1, to

b) Deadpool rolling for the Donut, seeing that he will Heal 2 from the result, increasing his Health Dial immediately by 2, and then lowering his Health Dial by 3 for the 3 Poison dmg he should receive.

In both examples, the end result of “his Health Dial is 1 lower than at the start of his turn” is the same, so there is an insignificant difference to how the end result occurs.

2. The Healing effect from i.e. a Barbarians Defense now occurs during DRP 4 (with all other non-damage effects) instead of DRP 6, which again is just a small timing change.

At the end of the day, this change helps tighten up the rules and previous key terms and clarifications. Even if you or your opponent completely forget this change, the end result of what happens to your Health due to receiving damage and healing does not change. Only the technical timing of exactly when you should be Healing is affected.

Note: The Healing from Huntress’ defense still functions as written, with the Healing effect netting against incoming damage. This is because this is Healing for a Companion’s unique Health Dial component, and therefore has a different rule than a Hero who is Healing.

Ruling Date: 10/31/2024 (update 3/20/2025)

Offensive Roll Phase

1. Using your Final Dice Result, you may only ever activate 1 Offensive Ability.
2. Most *Offensive Abilities* can be clearly defined as either not an *Attack* or an *Attack* (i.e. they deal at least 1 dmg).
 - a. Some abilities, such as the Cursed Pirate’s X Marks The Spot *Offensive Ability*, cannot be considered an *Attack* until after its Ability effects have been resolved

- b. if at least one “cutlass” symbol is rolled, it is now considered an *Attack*. If zero “cutlass” symbols are rolled, it is not an *Attack*.
 3. Once an Offensive Ability that is considered an *Attack* has been activated, it is now immediately considered that you have activated an *Attack*. Why this matters:
 - a. The Roll Phase step is now Offensive Roll Phase step 4.
 - b. You **can** now spend Attack Modifier status effects or cards to increase the dmg of your *Attack*.
 - c. This is why the common rule of “if you are about to gain more [status effect x] beyond the Stack Limit, you may spend already-existing [status effect x] to make room for the incoming [status effect x], as spending status effects is considered as Instant Action” can be done.
 - d. Your opponent **cannot** yet play cards or status effects that read “Play only when being *Attacked*” or “After being *Attacked*” because they have not yet been targeted.
 - i. This is not known until after the Targeting Roll Phase.

Definition of an Attack

- a. An *Attack* is any Offensive Ability that deals at least 1 point of dmg
 - i. While the rulebook has the “1” dmg as a black star-burst icon, this also includes red/undefendable dmg, too
 - ii. An Offensive Ability that deals 4 defendable dmg or 4 undefendable dmg are both *Attacks*.

Targeting Roll Phase

1. Interaction Name: Targeting Phase in various game modes, and the Defensive Roll Phase

Situation:

- A) Is there a Targeting Roll Phase in a 1vs1 game or is it skipped?
- B) How exactly is my opponent targeted in a 1v1 game?
- C) Does my opponent always have a Defensive Roll Phase? The rulebook states at the beginning of the DRP step the following: “If the Active Player’s Offensive Roll Phase results in an *Attack*, then the Defender now begins the Defensive Roll Phase.”

Ruling: Answers below in various places, summarized here:

A) Technically yes, but not relevant due to response B).

B) Your opponent is always the target.

C) Always a DRP.

Explanation:

This issue has been an inconsistency of the Dice Throne rulebook. The issues that arise from this do not typically take place in a standard game of Dice Throne, but do happen sometimes.

1A). Per the rulebook version 2.4.2 in two separate places, on pages 4 and 13, one says to skip the Targeting Roll Phase (TRP) in a 1v1 game, and the other says “if you have more than one opponent, you must determine your target”.

2A) A TRP does not make sense in a 1v1 game, as **your target is obviously your one opponent** (there are no other targets to choose from!). This was why it is stated it is “skipped”.

3A) The TRP can be considered both ways, as “skipped” or just sped through, but the end result is the same: **nothing happens during the TRP at all**. No choice is being made (your opponent is your one opponent, no choice of targeting exists), and there are zero opportunities for cards or effects or anything to be played. Therefore, **the Targeting Roll Phase is “skipped” for all intents and purposes**.

1B) The additional confusion is that now there is a NOTE on page 13 that gives a detailed example that “targeting still happens even if your ability does no damage”. This is a direct contradiction to the text at the top of the DRP section that states “if the Active Player’s ORP results in an Attack, then the Defender now begins the DRP”.

2B) This orange text also gives an example that is totally applicable in a 1v1 game, as the Gunslinger needs a target to “Inflict Bounty” on. This NOTE was supposed to clearly show that a target is needed even in a 1v1 game (and therefore, the TRP should not be skipped).

3B) This was not supposed to mean that at this exact point, a Hero is inflicted with said status effects. It was supposed to clarify that the targeted Hero would be inflicted with the Bounty during DRP 1 just like a normal Attack (it even gives an example of “inflict Bounty” in the DRP 1 step).

1C) The developers intent, contrary to the opening DRP text about needing an Attack for the Defender to begin the DRP, has always been that **a Defensive Roll Phase always happens**.

- Status effects are inflicted during this Phase (like Bounty from a non-Attack).
- There is always an opportunity for any player to spend status effects or play cards (such as during the DRP 5, the Defender could spend Evasive to avoid dmg or play the “Not This Time!” card, even against a non-Attack like collateral dmg).
- Damage is always dealt during this Phase (all dmg types, including collateral dmg).
- Status effects that are removed at the “end of the Roll Phase” are also supposed to be removed during this Phase (there is not supposed to be some secret “End of Roll Phase” that happens after the DRP and before the Main Phase 2).

Final Note: The wording will be updated in newer versions of the rulebook to correct the language and these inconsistencies.

Defensive Roll Phase

List of Damage Dealt Successfully Effects

Some *Offensive Abilities* have the keyword “then” which appears after a dmg value. These effects written after “then” are resolved after dmg has been successfully dealt.

- Note: The vast majority of abilities have the damage value at the end of the Offensive Ability description or after the word then, such as “Gain or inflict status effect X. Deal # dmg” (see Budo ability compared to Fist of Harmony ability, below).

Below is a comprehensive list of Action Cards, status effects, and Abilities that resolve at this point in time.

Barbarian

- Head Bash! action card can be played.
 - **Note:** Dmg has now successfully been dealt, so you cannot now play the card “Not This Time!” during this step to reduce dmg by 6 to try and negate this card's effect.
- Stun status effect token is removed, and its effect resolves (an additional Offensive Roll Phase is granted)

Moon Elf

- Entangle status effect token is removed.

Pyromancer

- Stun status effect token is removed, and its effect resolves (an additional Offensive Roll Phase is granted).

Monk

- Gains Chi from the following Offensive Abilities:
 1. Fist of Harmony,
 2. Fist of Tranquility,
 3. Lotus Strike,
 4. Transcendence,
 5. Zen Strike, and
 6. Way of the Lotus.

Paladin

- Gains Crit status effect and 2CP from the Righteous Prayer Offensive Ability.
- Gains Crit and Accuracy from the Mighty Prayer Offensive Ability.

Treant

- Barbed Vine status effect is removed.
- NOTE: Its “receive dmg” effect (i.e. the afflicted player will receive 0-1-2 dmg based on the number of *Roll Attempts* performed) should be resolved during the Defensive Roll Phase step 6.
 - The damage is not considered a separate instance of dmg, but should be accumulated and applied simultaneously during the Defensive Roll Phase step 6.
 - This interaction follows the rule that “all damage is accumulated and applied simultaneously at the conclusion of the current *Phase*.”

Tactician

- Constrict status effect token is removed.

Cursed Pirate

- Parlay status effect token is removed.

Vampire Lord

- Blood Power - The 4 Blood Power tokens healing effect resolves.
 - Heal equal to the full amount of damage your Attack successfully dealt, even if the target had less health (i.e. they were defeated and reduced to zero health).
 - Note: This 4 token Healing effect must be done during any previous step during the *Roll Phase*. Once damage calculations have concluded, you can no longer spend 4 Blood Power tokens for their healing effect.

Black Panther

- Energy Absorption Passive Ability activates (Black Panther gains one Kinetic Energy).

Miles Morales: Spider-Man

- Inflicts Webbed status effect from his Ensnare Offensive Ability, as well as dealing the updated leaflet effect of “When this token is inflicted deal 2 (dmg) as an isolated source of *undefendable* dmg.”

Doctor Strange

- Crimson Bands status effect token is removed.

Psylocke

- Paralyze status effect token is removed.

Rogue

- Ionic Drive Passive Ability activates (Rogue gains one Ionic Energy).

Iceman

- Dice Cube status effect token is removed.
- Glide status effect token can be spent to activate an additional Offensive Ability

Pale Lady

- Quenched! Action card - Healing from the card is resolved

Necromancer

- Dice are rolled for activated Undead (to possibly remove them)

1. Interaction Name: Activating your Defensive Ability

Situation: Is activating your Defensive Ability a.k.a. Defense mandatory or optional?

Ruling: Activating your Defensive Ability is optional.

Explanation:

1. This issue has been a source of confusion, as the Dice Throne rulebook has always explicitly stated the words “... if that *Attack*’s damage type is defendable, the Defender **may** activate their Defensive Ability.
2. A couple of years ago, this was previously ruled that activating your Heroes Defensive Ability was mandatory.
3. While activating your Defense is overwhelmingly always a positive thing for your Hero to do, the primary reason why you may not want to activate it is versus Black Panther. His Passive Ability grants him a Kinetic Energy anytime he receives dmg (including from a Heroes Defensive ability).
4. Other minor reasons would be some strategic plays when fighting Minions in Dice Throne Adventures or Henchmen in Dice Throne Missions. You may not want to deal 1 or 2 dmg to defeat them because you want another turn to continue fighting them.

In the end, this update also provides consistency between Offensive and Defensive Abilities: The rulebook has a helpful tip in the ORP section that reads.

“Tip: Activating a weak Attack against an opponent with a powerful Defensive Ability is not always advisable.”

It is now basically the same “Tip” with your Defensive Ability (as it may not be advisable to activate in certain situations).

Followup: At the point of DRP 2 (where you choose whether you want to activate your Defensive Ability or not), if you choose not to activate your Defensive Ability, skip to DRP 5. DRP 3 is when the Defender would roll their Defense Dice. DRP 4 is when the Defender would resolve their Defense Dice results.

When the response 99.9% of the time is "I DO roll my defense", this allows a response afterwards.(i.e. Defensive Roll Phase step 5).

The other response 0.1% of the time of "I DO NOT roll my defense" is also an acceptable response, that should be weighted exactly the same as "I do roll my defense" i.e. allows a response afterwards (i.e. Defensive Roll Phase step 5).

Location: Discord-Base game rules discussions

Ruling Date: 10/22/2024

Other clarifications:

1. Cards and status effects that can make an *Attack undefendable* must be played before the *Defensive Roll Phase* step 2.
 - a. The best time to use these cards is before the end of the *Offensive Roll Phase*, since this avoids any potential issues of your opponent rolling to activate their *Defensive Ability* before you make the *Attack undefendable*.
 - i. note that some effects that make an *Attack undefendable* must be used earlier, at the end of the ORP (like Guardbreak)

Location: Discord-Base game rules discussions

Ruling Date: 6/08/2026

Discard Phase

Note that no actions of any kind can be performed during this Phase. This includes playing Instant Action cards or spending status effects.

- This does not include the exhaustive list of “conclusion of your turn” effects listed below

After you end either:

- a. your *Main Phase* (2) (if you had 6 or less cards in your hand) or
- b. your *Discard Phase* (if you have more than 6 cards in your hand)

is when any effects that occur “at the conclusion of your turn” are resolved.

A full list of “at the conclusion of your turn” effects are below. These effects include:

- a. Ninja: Delayed Poison: Token is removed and 3 dmg dealt.

- b. Shadow Thief: Shadows is removed (only if they started the turn with the same single Shadows token)
- c. Samurai: Bushido: 1 Honor gained for using less than 3 Roll Attempts
- d. Vampire Lord: Blood Power: 1 Blood Power gained if the Vampire Lord successful deal dmg to an opponent who was afflicted with 2 Bleed tokens.
- e. Cursed Pirate: Cursed : 1 Cursed Doubloon is removed from her board
- f. Raveness: Hex: Token is removed from her opponent.
- g. Headless Horseman: Haunted Head: Dreadful token is gained if the Haunted Head is on an opponent.
- h. Pale Lady: Twilight (Werewolf side):
 - Moon Shard is removed from the Hero Board.
 - If this is the last Moon Shard, Hero Board is flipped over to the Pale Lady side.

3. Advanced Concepts

Performing Multiple Roll Phases in one turn

The following status effects and Abilities are a comprehensive list of effects that can cause a Hero to gain an additional *Roll Phase* or *Offensive Roll Phase*.

- Note that these additional *Roll Phases* typically involve removing all status effects that are typically removed at the end of the *Roll Phase*.

See 1. General Concepts >> Status Effects for a complete list of which status effects are removed at these points in time.

Gain an additional *Roll Phase*:

1. Stun - (Barbarian, Pyromancer, DTA)
 - a. after the *Attack* concludes (i.e. at the end of the *Roll Phase*), start a new *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Roll Phase* should be removed.
2. Comfort and Joy (Santa)
 - a. Immediately target the same opponent with an additional *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Roll Phase* should be removed.
3. Combo - (Miles Morales Spider-Man)
 - a. at the end of the *Defensive Roll Phase*, remove this token and start a new *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Roll Phase* should be removed.
4. Glide - (Iceman)
 - a. at the end of the *Defensive Roll Phase*, remove this token and activate the *Offensive Ability* that the Glide Path is connected to.

- b. An additional *Ability* is activated, and per the back of the leaflet, this is a new and distinct *Roll Phase*.
 - c. All status effects that typically are removed at the end of the *Roll Phase* should be removed.
- 5. Stamina Tonic - (DTA Loot card)
 - a. at the end of the *Roll Phase*, start an additional *Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Roll Phase* should be removed.

Gain an additional *Offensive Roll Phase*-only

- 1. Profiteer - (Tactician)
 - a. On a “medal” symbol, immediately begin an additional *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Offensive Roll Phase* should be removed.
 - i. see “1. General Concepts >> Status Effects” for a list of status effects that are removed at the end of the *Offensive Roll Phase*
 - c. Note that the status effects Blind or Blinding Light should have already been resolved before a “medal” symbol was rolled.
- 2. Deja Vu - (Doctor Strange)
 - a. Instead of activating an ability, conclude the current *Offensive Roll Phase*, and then start a new *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Offensive Roll Phase* should be removed.
 - i. see “1. General Concepts >> Status Effects” for a list of status effects that are removed at the end of the *Offensive Roll Phase*
 - c. This will remove the status effect Blind and Blinding Light (because the current ORP is concluded and all tokens should be removed at this point)
- 3. Harvest - (Necromancer)
 - a. On a “soul” symbol, immediately begin an additional *Offensive Roll Phase*.
 - b. All status effects that typically are removed at the end of the *Offensive Roll Phase* should be removed.
 - i. see “1. General Concepts >> Status Effects” for a list of status effects that are removed at the end of the *Offensive Roll Phase*
 - c. Note that the status effects Blind or Blinding Light should have already been resolved before a “soul” symbol was rolled.

Timing of Actions

Below are additional examples to highlight the various interruptions/ simultaneous play conflicts that could occur in a game of Dice Throne.

If you have any additional examples that you believe may be common or have come up in Organized Play or tournaments, please send them to dice-throne@rulepop.com.

1. You must resolve the first Evasive token that was spent before a second Evasive token may be spent, but you could **interrupt** its resolution to play the card "Try, Try Again!" on the first Evasive die roll, or your opponent could play "Helping Hand" on the first Evasive die roll.
2. You may roll for your Hero's Defensive Ability, but then **interrupt** its resolution by spending an Evasive (before resolving the dice results of the Defensive Ability).

Common Dice Throne gameplay example:

- a. A Moon Elf has rolled their Missed Me Defensive Ability.
- b. They have only rolled 1 "foot" symbol.
- c. Before they want to spend their "Better D!" card to try and roll 2 "foot" symbols (to halve incoming dmg), they could spend an Evasive token.
 - i. A result of 1-2 for Evasive means that they would avoid all incoming dmg, and they no longer need to worry about rolling 2 "foot" symbols at all!

1. Interaction Name: Timing on cards and status effects being removed

Situation: What happens when the status effect(s) that are to be removed by a card

- a. What Status Effects (WSE),
- b. Get That Outta Here (GTOH), or
- c. Transference.

are spent by the opponent in response to the card being played?

Ruling: varies, see examples below

Explanation:

1. Per the rulebook, when you play a Main Phase Action (MP) card, you must first spend the CP, then perform the card actions, then the card is put into your Discard pile.

Examples of each card played are as follows:

a. WSE:

- Reduce your CP by 2.
- Then "remove all status effects from a chosen player".
- This can be interrupted by your opponent performing an Instant Action, such as spending their Tactical Advantage to gain 1CP (which they can do multiple times).
- After this interruption, the card effect can now go back to being resolved.
- If the Tactician now has zero status effects to remove, then yes this card could be considered "wasted" and could now have no further effect, as you would have to choose an opponent with zero status effects, and remove them all, and simply place the card into the Discard Pile.
- However, the player could now choose themselves and remove all status effects from their own Hero Board (such as Constrict).

b: GTOH

- Reduce your CP by 1.
- Then "remove a status effect from a chosen player".
- This can be interrupted by your opponent performing an Instant Action, such as spending their Tactical Advantage to gain 1CP.

- After this interruption, the card effect can now go back to being resolved.
- If the Tactician still has one or more status effects to remove, you could choose one of those or choose one on your own Hero Board (if you have any).
- If the Tactician now has zero status effects to remove, then yes this card could be considered “wasted” and could now have no further effect, with you having to choose an opponent with zero status effects, and simply place the card into the Discard Pile.
- However, the player could now choose themselves and remove a status effect from their own Hero Board (such as Constrict).

c: Transference

- Reduce your CP by 2.
- Then “transfer one status effect from a chosen player to another chosen player”.
- This can be interrupted by your opponent performing an Instant Action, such as spending their Tactical Advantage to gain 1CP.
- After this interruption, the card effect can now go back to being resolved.
- If the Tactician still has one or more status effects to remove, you could choose one of those or choose one on your own Hero Board (if you have any).
- If the Tactician now has zero status effects to remove, then yes this card could be considered “wasted” and could now have no further effect, with you having to choose an opponent with zero status effects, and simply place the card into the Discard Pile.
- However, the player could now choose themselves and transfer a status effect from their own Hero Board (such as Constrict).

Note that in the above examples a-b-c, there is no “a-ha! I have acted more quickly and you can no longer spend those tokens! A-ha!” moment.

- A Tactician can still spend their Tactical Advantage tokens (which is an Instant Action).
- These card effects (notably WSE) do force your opponent to spend their status effects, so that they are unable to use them going forward (such as the Tactician no longer being able to spend 4 tokens to gain themselves a “Protect” token).
- The cards are all still spent, with the player unable to now state “This card has no effect, so I will just put it back into my hand and refund the CP back to myself”.
 - Which is like saying “I want to go back in time and pretend I did not play this card at all”, and that is not allowed in Dice Throne.
- In all examples, your opponent could also just simply allow their tokens to be removed/ transferred and the card's effect ends there.

Situation: What happens when a status effect that is to be removed by a card/token

a. Buh-Bye, or

b. Cleanse Status Effect token

is spent by the opponent in response to the card being played?

Ruling: varies, see examples below

Explanation:

IMPORTANT NOTE: *the rulebook does provide some conflicting wording about whether Instant Actions can be interrupted or not, and whether Instant Actions can interrupt other Instant actions. The wording will be cleaned up in these sections in the next iteration of the rulebook*

Examples of each card/token played are as follows:

a. Buh-Bye:

- Reduce your CP by 2.
- Then “remove a status effect from a chosen player”. This is where the “Timing Conflicts” section of the rulebook kicks in on whether it is:
 - #1. the Buh-Byeing players turn, or
 - #2. Not the Buh-Byeing players turn.
- #1. if it is currently the Buh-Byeing players turn, this removal cannot be interrupted by your opponent performing an Instant Action, such as spending their Tactical Advantage to gain 1CP.
- #2. if it is NOT currently the Buh-Byeing players turn, this removal can be interrupted by your opponent performing an Instant Action, such as spending their Tactical Advantage to gain 1CP.
- After this interruption, the card effect can now go back to being resolved.
- If the Tactician still has one or more status effects to remove, you could choose one of those or choose one on your own Hero Board (if you have any).
- If the Tactician now has zero status effects to remove, then yes this card could be considered “wasted” and could now have no further effect, with you having to choose an opponent with zero status effects, and simply place the card into the Discard Pile.
- However, the player could now choose themselves and remove a status effect from their own Hero Board.

b: Cleanse (status effect)

- This token would depend on whether the Cleansing player is the target of
 - a. an Instant Action or
 - b. A non-Instant Action removal effect, as well as whether it is
 - #1. The Cleansing players turn or
 - #2. Not the Cleansing players turn.

Below are a number of examples where a Monk has 1 Cleanse, 1 Evasive, and 1 Chi.

- a #1. if it is currently the Cleansing players turn, and their opponents removal is i.e. Bye-Buh, then the Cleansing player can interrupt their opponent.
- If the opponent declares that they want to remove your Evasive, the Monk could Cleanse the Evasive token.
- The opponent could then re-check their card, and could now choose to remove the final remaining Chi.
- a #2. if it is currently NOT the Cleansing players turn, and their opponents removal is i.e. Bye-Buh, then the Cleansing player cannot interrupt their opponent.
- If the opponent declares that they want to remove your Evasive, the Monk cannot Cleanse the Evasive token first, as the Buh-Byeing player has priority.

b #1 + #2. In either case, the Cleansing player has priority since spending a status effect is an Instant Action.

-Since their opponents removal (i.e. Get That Outta Here) is not an Instant Action, the Cleansing player can interrupt their opponent's card that is being played.

-If the opponent declares that they want to remove your Evasive, the Monk could Cleanse the Evasive token. The opponent could then re-check their card, and could now choose to remove the final remaining Chi off their own Hero Board.

Update:

The December 2024 Discord link above is much more detailed in the explanation as to why this is the case.

The earlier October 2024 Discord link is also still providing examples where each cards effect MUST be resolved. I think the point of confusion is where I am saying "then yes this card could be considered "wasted" and could now have no further effect, with you having to choose an opponent with zero status effects".

-the key words above is "you having to choose". The example is still a forced-choice, but you can certainly target an opponent who has zero status effects to remove.

At the end of the day, the number of status effects that can interrupt the card "Get that outta here" or "transference" is very small.

These are generally menu-list status effects and include:

Blood Power, Tactical Advantage, Egg Nog, Synth, Nyra's Bond, Cleanse, X-men: Acuity, Rage, Ice Shard, Battle Plan, Support

Therefore, when playing the card Get That Outta Here, if you are trying to remove one of the above status effects from your opponent, just make sure that if you play this card, that you will not have to end up removing some other status effect if they do choose to interrupt your GTOH resolution with these status effects.

Update: 2025/01/22 Discord-base game rules discussions

2. Interaction Name: Defeating an enemy mid-Attack

Situation: What happens when you defeat an enemy in the middle of their Attack? Two example situations are presented below:

a) a 1vs1 game.

b) game with more than 2 players (King of the Hill, DT Adventures).

Ruling: The Attack and the damage still exists; see explanation

Explanation:

1. There are a small number of ways that an enemy can be defeated midway through their *Attack*.

2. One obvious example is if a Vampire Lord "Steals" the last remaining Health of their opponent due to their Defensive Ability. Another is Thor Throwing Mjolnir to deal 1 isolated dmg.

3. This is best shown in an example (Moon Elf vs Vampire Lord) for both of the two scenarios.

a) 1vs1 game (Moon Elf vs Vampire Lord).

1. Moon Elf (with 1 Health remaining) activates Entangling Shot against the Vampire Lord (with 5 Health remaining).
2. Beginning of the DRP 1, the Vampire Lord is inflicted with Entangle
3. Vampire Lord activates Defense and rolls one-six (Steal 1 Health)
4. DRP 4, the Steal 1 Health resolves, and the Moon Elf is defeated as their Health is zero
5. The game ends, the Vampire Lord wins, and the DRP 6 (when all damage and prevention effects are accumulated and applied simultaneously) does not occur at all.

b) 1v1v1 King of the Hill game (Moon Elf vs Vampire Lord vs Barbarian).

1. Exact same as step 1 above.
2. Exact same as step 2 above.
3. Exact same as step 3 above.
4. Exact same as step 4 above (Moon Elf is defeated).
5. Since there is still more than 1 player alive, the game now proceeds as normal. The DRP 6 (when all damage, prevention, ~~and/or healing effects~~ are accumulated and applied simultaneously) NOW does occur. The Vampire Lord (with 6 Health) receives 7 dmg, and is defeated. The Barbarian is the last Hero standing and wins.

4. As shown above, this clarification is not an issue for a standard 1vs1 game of Dice Throne. The area of confusion is where an Attack occurs, and a Defense is rolled, but then if the Defense defeats your opponent, what happened to the original Attack?
5. The primary concern is how the Attack resolves when there are multiple players (which happens much more often in a game of Dice Throne Adventures, where up to 4 Heroes could be battling up to 4 Minions.
6. Step #2 of the above example clearly shows that the Vampire Lord should be inflicted with Entangle, meaning a portion of the Offensive Ability has already successfully been resolved.
7. A golden rule of Dice Throne is that you can never “go back in time” and change an earlier result. This means that the Attack damage should also still be incoming.
8. The timing issue exists as a Hero is “defeated” once their Health is reduced to zero. This reduction to zero is just now happening at a point in time that is different than the usual end of a Phase when all effects are applied simultaneously (Which is also a golden rule of Dice Throne).

Location: Discord-dice throne adventures

Ruling Date: 11/26/2024

3. Interaction Name: Doing anything and allowing your opponent to respond

Situation: If my opponent and I both “pass” on the current game state, can one of us go back and now do some other action (i.e. Attacker NOW wants to play an Attack Modifier, or the Defender NOW wants to play their Evasive).

Ruling: No! Both players have agreed to the game state, therefore “Pass-pass” is done.

Explanation:

1. In Dice Throne, there is no “playing chicken” or going back in time.
2. Allowing this would mean that you now have additional information (that the other player has no response to your action) and NOW you can do something to make your action better.

3. Below is an example of a typical Roll Phase Roll. Let's pretend that the Defender has 1 Evasive status effect that could possibly avoid all incoming dmg.

1. Attacker - "I attempt to activate (my Offensive Ability). Any response?"
2. Defender - "No response, it activates."
 - a. **Pass-pass DONE, play continues.** Ability has been successfully activated. You cannot go back in time and now change your Ability.
3. Attacker - "Alright, that will be (6) undefendable coming at you."
4. Defender - "Ok, no response to that so I'll take 6 dmg."
 - a. **Pass-pass DONE**, play continues. Defender has agreed that yes, sure, 6 undefendable dmg is now incoming, and they are not going to spend their Evasive token. Life is good.

YOU CANNOT AFTERWARDS say,

5. Attacker - "Ok. But now, I would like to add (insert Attack Modifier) to add 2 damage."
6. Defender - "Ok, cool! After you have now added 2 dmg to your Attack, I will try to Evade your "6 + 2" dmg"
 - a. **INCORRECT.** Both players had agreed 6 dmg was incoming in Step #4.
 - b. The Attacker should have continued above in Step #3:

"Alright, that will be (6) undefendable dmg coming at you AND NOW I also play an Attack Modifier to add 2 dmg.

 - i. At this point, Defender could spend their Evasive (as the game state has changed i.e. from 6 to 8 dmg)

On the line of not being able to "play chicken", someone can NOT still play an effect after both players have accepted the game state. An example (of a not-allowed play)

- Ok, so you will take 6 dmg and not use your Evasive?
- Sure.
- How about I spend 1 Chi token and now deal 7 dmg?
- Sure.
- How about I spend 1 more Chi token and now deal 8 dmg?
- Well now, I will use my Evasive. SURE!

Incorrect and not allowed! No playing chicken!

Location: Discord-base game rules discussion

Ruling Date: 10/25/2024

4. Interaction Name: Timing of Offensive Abilities and "being Attacked"

Situation: When exactly can I play a card or effect that reads "play only after being Attacked"?

Ruling: From the time period of DRP 1 to DRP 5

Explanation:

1. A player can only "be Attacked" once they have incoming Attack dmg after being successfully targeted with an Offensive Ability that is an Attack.
2. This means that they have to be targeted by an Attack.

3. Targeting occurs after the ORP. If this “play only after being *Attacked*” were to be able to be resolved in a 1v1v1 game, technically EVERY OPPONENT could argue that they are “being Attacked” during the ORP (which obviously is not correct; one of them needs to be targeted first)
4. Therefore, the first time one of these cards can be played is the *Defensive Roll Phase* step 1.
5. (update) And the last time it could be played is DRP 5 (just before final damage calculations)

Location: Discord-base game rules discussions

Ruling Date: 10/25/2024 (updated for clarity 6/16/2025)

4. Game Modes

King of the Hill

1. Interaction Name: King of the Hill and drawing a bonus card

Situation: When playing a King of the Hill (KotH) match-up, can a player draw a card for Attacking the Leader multiple times? Also, what about when the game is down to two players?

Ruling: A player should only ever be able to draw 1 card from Attacking the Leader in a KotH game. ~~No card is drawn when a KotH match is down to two players i.e. 1v1~~

Explanation:

1. Per the 3-player game mode rules, you only draw a card when you CHOOSE to Attack the Leader (i.e. player with the most Health).

The following status effects grant an additional Roll Phase, and rulings are noted:

2. Spider Man's Combo: Per the status effect description (see text in blue), when the token is spent, you target the same opponent with an additional ORP. This is NOT a choice, therefore you DO NOT get to draw a second card if this opponent is still the Leader when being attacked a second time.

3. Barbarian/Pyromancer Stun: Has the same wording. Same as #2 above.

~~4. When the game is down to two players, there is also no longer a choice about which player you can Attack. Therefore, you do not get a card if you are Attacking your opponent who has more Health than you.~~

5. Iceman's Glide: Same as #2 above, as the additionally activated *Offensive Ability* must target the same opponent.

6. Santa's Comfort and Joy: Same as #3.

UPDATED point #4 is no longer correct. When the game is down to two players, a player Attacking the Leader will STILL draw 1 bonus card.

Added #5 and #6 above.

Location: Discord-Base game rules discussion

Ruling Date: 9/9/2024 (updated 11/28/2024)

2vs2 Teams

Other clarifications:

1. The Targeting Roll Phase targeting die roll can be affected by any player (following normal die priority rules).
 - a. I.e. an opponent on the other team could play "So Wild" to change this die.
 - b. EXCEPTION: Opponents cannot affect this die roll if the targeting team has activated their *Ultimate Ability*.
2. If your team successfully activates an *Ultimate Ability*, the other team member can still perform Actions and effects during its resolution.

- a. For example, if the Huntress activated their *Ultimate*, their teammate the Tactician would be able to spend 3 Tactical Advantage in order to inflict the Targeted status effect on an opponent.
- b. Both of your opponents can still perform no action of any kind (as normal).

5. Heroes

Listed in order of Hero Box releases.

Rulings in questions are organized in the following priority.

1. Specific Hero Ability question.
2. Specific Hero status effect question.
3. Other.

Look in the other Hero(es) section if you cannot find the ruling you are searching for.

Formatted as template shown below:

#. Interaction Name: Shows the names of the status effects/abilities/cards being clarified

Situation: The specific interaction in question explained in detail.

Ruling: Summary of the ruling.

Explanation: The reason behind the ruling. May also include an example or breakdown of the interaction for clarity. Listed with numbered and lettered identifiers for referencing.

Location: Where to find ruling and other community discussions about the ruling.

Ruling Date: ruled as of date listed MM/DD/YYYY

Dice Throne Original Heroes

Season One

1. Barbarian

1. Interaction Name: Thick Skin II and Powder Keg

Situation: What happens if the Cursed Pirate inflicts a second Powder Keg (Keg) onto a Barbarian who successfully rolls two Hearts on his Thick Skin II Defensive Ability Upgrade?

Ruling: The first Keg blows up, the second Keg is removed.

Explanation:

1a. Cursed Pirate activates an Attack that inflicts a second Keg.

1b. Per the leaflet, Powder Keg reads "If a player becomes inflicted with Keg while already inflicted with a Keg, the first Keg immediately blows up (dealing 3 as an isolated source of undefendable dmg)."

1c. Per the rulebook, this Keg status effect would be inflicted during the DRP step 1.

1d. The "first Keg" blows up, and the Barbarian is now inflicted with "second Keg."

2a. Barbarians upgraded Defense reads "on [Heart-Heart], you may also prevent 1 incoming status effect."

2b. Per the rulebook, this activation occurs during the DRP step 4.

2c. After successfully rolling [Heart Heart], the Barbarian would prevent the "second Keg", which is removed off of his Hero board.

Summary: In Dice Throne, you cannot go “back in time” and change what has already occurred, which in this example is going back in time to prevent the "first Keg" from blowing up.

Location: Discord-Barbarian

Ruling Date: 5/28/2024

2. Interaction Name: Thick Skin II and Webbed (Miles Morales Spider Man) and Cursed Doubloons (Cursed Pirate)

Situation: What happens to incoming status effects when a Barbarian who successfully rolls two Hearts on his Thick Skin II Ability Upgrade? Specifically,

1. Miles Morales Spider-Man’s “Webbed” Negative Status Effect and

2. Cursed Pirate’s “Cursed Doubloon” (CDs) Unique Status Effect?

Ruling:

1. Webbed is not inflicted on the Barbarian.

2. ~~Cursed Doubloons are inflicted on the Barbarian.~~

Explanation:

1a. Webbed Rules Clarification has been updated per the newly-released updated leaflet

1b. Due to “then” rules, Webbed is not inflicted until after dmg calculations.

1c. Therefore, after successfully rolling [Heart Heart], the Barbarian would prevent the incoming Webbed status effect, and the 2 isolated dmg is not dealt to the Barbarian (because the Webbed never became inflicted on his Hero board).

2a. ~~Per Cursed Doubloon’s (CD) description, these tokens can not be removed, moved, or prevented by anyone except the Cursed Pirate.~~

2b. ~~While the leaflet description does not specifically mention “this includes preventing a CD being inflicted to an opponent”, CDs are not supposed to be interactable in any way by any player except the Cursed Pirate.~~

2c. ~~This would also mean that Treant’s Dryad cannot prevent an incoming CD, either.~~

~~See 8. Treant example 3~~

Section updated 2025/01/25 for consistency and avoid any further confusion: The Cursed Doubloons interaction cannot ever happen (as Cursed Doubloons are inflicted via undefendable Attacks)

Location: Discord-Barbarian

Ruling Date: 9/20/2024

3. Interaction Name: Stun resolution

Situation: Can my opponent play cards, spend status effect etc just prior to the Hero inflicting the Stun status effect?

Ruling: No

Explanation:

1. The status effect description reads that “no abilities or effects can be used” once Stun is inflicted.

2. Stun is inflicted at the start of the DRP, after a target has been selected during the TRP.

3. No Actions can be performed while Stunned or if you are about to be inflicted with Stun.

4. This is an exception to the general rule that an “Instant Action” can be played to interrupt the resolution of an Offensive Ability.

Location: N/A

Ruling Date: 12/19/2024

2. Moon Elf

1. Interaction Name: Blind activation

Situation: When exactly should a player resolve Blind i.e. roll a die?

Ruling: Roll for Blind right after you have successfully activated an Offensive Ability.

Explanation:

1. The Blind status effect description reads that the die must be rolled at the conclusion of the Offensive Roll Phase (ORP)

1b. This point of time is specifically supposed to be at the very start of ORP, Step 4, before the Ability's variable effects are determined

1c. This is before any ability die activators are rolled for (i.e. before rolling 5 dice if you activate the Moon Elf's “Exploding Arrow” ability

2. The Blinding Light status effect: Same as point 1 above

We will look into possibly changing the wording in a future print run for clarity of language.

UPDATED: The Blind status effect is also still removed from the afflicted player if they fail to activate an Offensive Ability at all (same as all previous rulings that have been made)

Location: Discord-Moon Elf

Ruling Date: 12/13/2024

2. Interaction Name: Exploding Arrow and rolling sixes

Situation: When exactly does the “lose 1 x Moon CP” occur

Ruling: Start of the DRP

Explanation:

1. During the Defensive Roll Phase step 1, their opponent may be able to spend their CP (with a card such as “Double Up!” or “Not This Time”) because the Action card is an Instant Action and can interrupt the resolution of the Offensive Ability effect (of opponent loses 1 CP).

Location: N/A

Ruling Date: 12/19/2024

3. Pyromancer

1. Interaction Name: Combustion and Buh-Bye! card

Situation: What is the speed of the remove-Fire Mastery on the Pyromancer's Combustion ability?

Ruling: Can remove a Fire Mastery at the “then” point of the ability. See below for example

Explanation:

1. The wording for Combustion has already been updated in future printings to now read “Gain 1 Fire Mastery. Then remove up to...”
2. As per the rulebook regarding “Then”, the word “Then” creates a break in play during which players may play cards.
3. At the point of “Then”, yes an opponent could play Buh Bye to remove one of the Fire Mastery tokens from the Pyromancer.
- 4a. Of course, this is only useful if the Pyromancer now has 1-2-3-4 Fire Mastery tokens, as they would now after Buh Bye! Only have 0-1-2-3 tokens remaining to remove for Combustion.
- 4b. If the Pyromancer had 5 tokens, they would still have 4 remaining, so they can still fully utilize Combustion.
5. As for the originally-printed Hero Boards (which are worded slightly differently), the ruling is the same as above.
6. Another note, if your opponent is declaring that they would like to activate Combustion, you could at this point play your Buh Bye! card on one of their Fire Mastery, which would avoid all of the timing issues noted above...

Further clarification example:

You have 5 FM and activate combustion. Which of the following is correct?

A. Gain the 1 FM from combustion (which would over stack so you would lose it) first and then remove 4. Resulting in 1 FM left on your board.

B. First remove 4 FM tokens to make room. Then, gain the 1 FM from combustion after. Resulting in 2 FM left on your board.

Example A is correct. Example B is incorrect.

Location: Discord-Pyromancer

Ruling Date: 6/28/2024

2. Interaction Name: Meteoroid ability and Cursed Pirate's Passive Ability

Situation: How does the Cursed Pirate's, 'cursed' side, Cursed Passive ability (triple jinx?) function when they are Stunned?

Ruling: No Powder Keg is inflicted. Being Stunned stops the Passive Ability from happening.

Explanation:

1. When Stunned, the Stunned player cannot use any Passive Abilities
2. Therefore, if a Pyromancer were to activate “Meteoroid” (which only inflicts Stun, Knockdown, and Burn), they would be inflicting Stun at the same time that the Cursed Pirate's Passive ability would be triggering.
3. Due to Timing Conflicts resolution, the Active Player (Pyromancer) would resolve first, meaning that now the Cursed Passive Ability cannot activate (since they are Stunned)

Location: Discord-General Rules

Ruling Date: 10/8/2024

3. Interaction Name: Stun resolution

Situation: Can my opponent play cards, spend status effect etc just prior to the Hero inflicting the Stun status effect?

Ruling: No

Explanation:

1. The status effect description reads that “no abilities or effects can be used” once Stun is inflicted.
2. Stun is inflicted at the start of the DRP, after a target has been selected during the TRP.
3. No Actions can be performed while Stunned or if you are about to be inflicted with Stun.
4. This is an exception to the general rule that an “Instant Action” can be played to interrupt the resolution of an Offensive Ability.

Location: N/A

Ruling Date: 12/19/2024

4. Shadow Thief

1. Interaction Name: Dealing CP as dmg Offensive Abilities

Situation: Clarification of how much damage is dealt when you activate the Shadow Thief's small or large straight ability

Ruling: Dmg = CP at point that dmg per CP is checked during ability activation (example below)

Explanation: Answer: (as an example).

1. Shadow Thief (ST) has 7 CP.
2. ST activates Insidious Strike, with the ability reading “gain 3 CP. Then deal CP as dmg”
- 3a. ST's CP would go from $7 + 3 = 10$ CP, meaning they will deal 10 dmg at this point.
- 3b. This 10 dmg does not change due to any future adjustments to the ST CP.
- 3c. If ST were to play the card “Double Up!” during the opponents' Defense, the damage being dealt is still 10 dmg (not $10 \text{ CP} - 1 \text{ CP spent} = 9 \text{ dmg}$)
4. The rules clarification on the Shadow Thief leaflet was written to account for point 3c above.

Location: Discord-Shadow Thief

Ruling Date: 6/19/2024

2. Interaction Name: Pickpocket and stealing CP

Situation: Shadow Thief (ST) activates Pick Pocket while rolling a “6”. How much CP does the ST gain if his opponent subsequently spends all of their CP (via Instant Action cards) and now has 0CP?

Ruling: Shadow Thief always gains the listed amount of CP from Pick Pocket ability. Your opponent is able to spend their CP mid-Pick Pocket (ie playing the card Double Up!) before their CP is “stolen if a “6” was rolled”

Explanation:

1. The Pick Pocket ability when activated, gains the ST 2/3/4 CP
2. The secondary effect has the specific wording of “may instead be stolen”. This is not the same as the Dice Throne keyword “Steal”
3. The “If 6 was rolled” effect is simply an additional negative effect that occurs on the ability.

4. The initial "Gain # CP" in step #1 has already occurred and cannot be reversed or rolled-back (i.e. the ST cannot "go back in time" and change the amount of CP that was gained).
5. The words in the text "may instead be stolen" occur in the Defensive Roll Phase, Step #1. CP may be spent before this occurs (see example in Final Ruling below)

Note: the ability wording is different from other Heroes who have a "Steal" effect (Cursed Pirate). "Steal" was not a keyword when this very first set of Heroes was released, and this keyword "Steal" is not used for the ability Pick Pocket (it does not read "...something something Steal 1CP")

Semantically, the ability could instead read "If [6] was rolled, your opponent loses up to [1CP]". We will look into possibly changing the wording in a future print run for clarity of language.

Location: Discord-Shadow Thief

Ruling Date: 7/24/2024

3. Interaction Name: Shadows status effect duration

Situation: When exactly should a player remove Shadows?

Ruling: Shadows is removed after a Hero has been under the effects of the same single cardboard piece of "Shadows" for one complete turn (Upkeep Phase to end of turn).

Explanation:

I will provide an exhaustive list of how/when Shadows can be gained, and also list when it is removed. ST = Shadow Thief

1a. ST does not start their turn with Shadows. ST rolls Shadow Dance or Shadow Shank (Ultimate) and gains Shadows. They will remove Shadows at the end of their next turn.

1b. ST starts their turn with Shadows. ST rolls Shadow Dance or Shadow Shank (Ultimate) and gains Shadows. They will remove Shadows at the end of the current turn (they did not gain the newer instance of Shadows due to Stack Limit of 1. The original Shadows is removed at the end of the turn).

2a. ST does not have Shadows. ST rolls 2-sixes on their Shadow Defense ability and successfully gains Shadows. They will remove Shadows at the end of their next turn.

if the ST already had Shadows, they would not have been able to roll their Defensive Ability in the first place (see status effect description)

3. ST does not start their turn with Shadows. During their own turn, at any point during the turn, they play the Instant Action card "Enter the Shadows" and gain Shadows. They will remove Shadows at the end of their next turn.

4. During their opponents turn, at any point during the turn, they play the Instant Action card "Enter the Shadows" and gain Shadows. They will remove Shadows at the end of their next turn.

5. Updated: if ST starts their turn with Shadows, but then removes it during their turn, but then gains Shadows again during their turn, the ST will remove Shadows at the end of their next turn (this second Shadows is a new token that would refresh the duration)

Location: Discord- Shadow Thief

Ruling Date: 2/3/2024

4. Interaction Name: Shadows and blocking damage

Situation: Which damage exactly is not received when a hero has Shadows?

Ruling: Most of it is blocked; see below.

Explanation:

1a. Shadows is written as *when a player with this token is damaged as a result of an opponent's ORP, no damage is received and no defense is made (although the ORP still "succeeds" and other effects may apply)*

1b. This means any damage resulting from abilities in the ORP (i.e. ability reads "deal 7 dmg")

1c. Shadows does block all damage types from an Offensive Ability, except Ultimate.

1d. Shadows does not block damage from other status effects or Companions triggered due to effects done this Roll Phase.

using Thor as an example

- Shadows blocks the 10 dmg that would be incoming from Thunder Bolt (his large straight), but would not block the 1 isolated dmg when Mjolnir is thrown at the Shadow Thief.

1e. Also note that Shadows does not block or avoid any dmg received from an opponent's Defensive Ability roll (i.e. the Pyromancer rolls 5-Flames when activating her defense)

Location: Discord-Shadow Thief

Ruling Date: 10/23/2025 (updated 1/26/2026)

5. Monk

6. Paladin

1. Interaction Name: Blessing of Divinity and an opponent's Ultimate

Situation: How does Blessing of Divinity (BoD) interact with an Ultimate? Isn't removing the token an action that is being taken during an Ultimate (which is not allowed since no action of any kind can be taken by an opponent during an Ultimate)? What about isolated dmg?

Ruling: "Blessing of Divinity, for all intents and purposes, is a single status effect bestowed by the Dice Throne gods, to a few select worshippers of their teachings, (the Paladin and Seraph), that is the one single thing that can happen during an Ultimate to stop their followers (the Paladin and Seraph and their team members) from being defeated."

Explanation:

1. As has been one of the Golden Rules of Dice Throne, included on the front of every Heroes leaflet "no action of any kind can be taken by an opponent during an Ultimate". The only thing you can touch is your Health Dial and lower it by "X" dmg.

2. For a clear example, an opponent cannot spend Protect during an Ultimate, obviously.

3. The status effect BoD, as noted in the quick summary, "Prevent(s from) being defeated".

4. As has been ruled in multiple places, including attempts to be clarified on the back of each Heroes leaflet who have this status effect, BoD is not affecting the resolution of an Ultimate in any way. The player who has BoD is not performing any action during this result, the BoD token is simply just stopping you from being defeated.

5. As a further clarification regarding isolated damage and BoD, example below,

A. if Paladin has 5 Health and is being attacked with an Ultimate from Black Panther, who mid-Ultimate also reaches stack limit of Kinetic Energy and "bursts", dealing 5 isolated dmg to Paladin.

B. The Paladin would be reduced to 0 Health, (the dmg is isolated)

C. BoD would resolve its effect (Health set back to 1),

D. the Paladin would die from the remaining 11 dmg from the Ultimate.

Final ruling: While points 3-4 do both try to let the masses know that BoD still is triggered during an Ultimate, because it is not affecting the Ultimate in any way, it may still be viewed as unclear. This status can trigger at any point during an Ultimate.

Location: Discord-Paladin and Seraph

Ruling Date: 8/16/2024

2. Interaction Name: Blessing of Divinity on multiple Heroes in a team game

Situation: In a 2x2 match if two Heroes on the same team both have Blessing of Divinity (BoD) and that team is hit by a fatal blow, what happens?

Ruling: The next teammate in turn order would trigger their BoD. The next one would not resolve at all.

Explanation:

1. When the team's Health is reduced to zero, both Heroes now have tokens that want to be resolved simultaneously.
2. Per the end of the "Timing Conflicts" section (see text in yellow), turn order is used to resolve which Heroes BoD should trigger first.
3. After the first Heroes BoD would be successfully removed, the second teammates BoD would no longer have a valid use condition (as your team now has 1 Health) and therefore would no longer trigger at all.

Location: Discord-Paladin

Ruling Date: 10/1/2024

3. Interaction Name: Paladin Passive Ability upgrade and rolling a "6"

Situation: At what time does a Paladin with an upgraded Tithe II gain the 1CP from using a 6 in their ORP Offensive Ability activation?

Ruling: The Offensive Roll Phase Step 4

Explanation:

1. Paladin performs the 1 CP gain after successfully activating the Offensive Ability, during the "ORP Part 4: resolve parts of offensive ability not requiring a target."

Location: N/A

Ruling Date: 11/28/2024

4. Interaction Name: Retribution status effect resolution

Situation: Can the Paladin's opponent activate their Defensive Ability in response to a spent Retribution?

Ruling: No

Explanation:

1. Retribution simply deals half of incoming dmg (rounded up) back to the Attacker.
2. This dmg is not defendable and should be applied simultaneously with all other damage and prevention at the conclusion of the Phase in which it was dealt.

Location: N/A

Ruling Date: 1/21/2025

5. Interaction Name: Retribution and Prevent half vs Prevent all

Situation: With regard to spending Retribution, is there a mechanical difference between preventing 1/2 damage twice, and preventing all dmg once.

Ruling: Yes there is per Final Dmg Total calculations (see below)

Explanation:

1. Preventing 1/2 damage twice is two instances of "multiply/divide"
- 2a. Evasive, where a successful outcome is that no dmg is received, is effectively "minus infinity dmg".
- 2b. This is exactly the same as Loki's Illusion which does just spells out "prevent infinity dmg".
3. This means that Retribution cannot be used.

In summary:

Yes Retribution vs Protect.

No Retribution vs Evasive.

Location: Discord-Paladin

Ruling Date: 2/13/2026

7. Ninja

1. Interaction Name: Defense re-roll effects

Situation: (using specifically the Ninja as an example) What happens to the "you may re-roll one of these dice" if a Ninja does not initially use it during their Roll Attempt, but their defense roll is then altered by their opponent?

Ruling: They can still utilize the "you may re-roll one of these dice" effect.

Explanation:

- 1a. This re-roll effect is similar to a bonus effect on the Defensive Ability that can be utilized before it is activated.
- 1b. It is not tied to the rolled die outcomes of the ability. This is why you can only do this re-roll a die effect before you resolve any of the die outcomes above it.
2. If a Ninja "locks-in" and presents their dice to their opponent without using the re-roll, their opponent can a) do nothing, or b) can alter these dice.
 - a) Doing nothing means the defense roll now resolves, and the Ninja is not able to "go back in time" and now choose to re-roll one of these dice (not allowed).
 - b) If these dice are altered, the dice get "passed back" to the Ninja. At this point, the Ninja can also alter their own dice, play Better D to get an additional Roll Attempt, OR still perform this re-roll effect.
- b2) note that this is exactly the same as what happens during the ORP if you do not utilize all of your Roll Attempts; dice that are passed back to you can still be altered by you, and any additional Roll Attempts may be taken
3. Other two examples: Both Miles Morales - Spider Man and Black Widows defense specifically reads "you may perform an additional Roll Attempt" in their defense. Same ruling as above point 2b) applies to these two effects.

Location: Discord - Ninja

Ruling Date: 9/4/2025

8. Treant

Barbed Vine: Note that its “receive dmg” effect (i.e. the afflicted player will receive 0-1-2 dmg based on the number of *Roll Attempts* performed) should be resolved during the Defensive Roll Phase step 6.

- The damage is not considered a separate instance of dmg, and should be accumulated and applied simultaneously during the Defensive Roll Phase step 6.
- This interaction follows the rule that “all damage is accumulated and applied simultaneously at the conclusion of the current *Phase*.”

1. Interaction Name: Overgrowth ability and Buh-Bye! card

Situation: What is the speed of the discard a Wellspring on the Treant’s Overgrowth ability, in regards to can my opponent successfully Buh-Bye! it?

Ruling: If Wellspring previously on Hero Board, yes. If gained mid-activation, no.

Explanation: No Jo

1. The Overgrowth ability itself is not considered an Instant Action-speed.
2. If the Treant already had a Wellspring (WS), an opponent could Buh-Bye the Wellspring before the ability is activated to remove the WS because playing Buh-Bye is an Instant Action that interrupts the normal flow of play.
3. If the Treant instantly gained a WS mid-activation of Overgrowth (from Drink Deep), the Treant would be free to discard this Wellspring, as he is the Attacking Player and has priority. Note: For all intents and purposes, the word “discard” should be treated the same as “spent”. Therefore, it being the Active Player’s turn would mean that they have priority on spending this status effect. The current wording on the ability of “You may discard Wellspring to make this undefendable dmg” will be adjusted in future printings.

Location: Discord-Treant

Ruling Date: 6/28/2024

2. Interaction Name: Growing Spirits

Situation: Can you grow the same Spirit multiple times if it says “Grow 3 Spirits” and can you spend a Spirit in the middle of Growing?

Ruling: You can grow the same Spirit multiple times with the same Grow action. You cannot stop mid Grow to spend a Spirit.

Explanation:

Location: Discord-Treant

Ruling Date: 12/21/2020

Season Two

9. Gunslinger

1. Interaction Name: Bounty and the CP gained

Situation: Gunslinger Attacks an opponent inflicted with Bounty and wants to use the CP gained to play a card during the same Attack, when is the CP gained so Gunslinger can use it?

Ruling: The CP is gained in DRP 1 (right before the opponent roles for their defense).

Explanation:

1. The CP gain is lumped in with the “non dmg effects that require a target” in DRP 1.
2. For all practical purposes, right before the defensive roll is when the CP is gained.
3. If this already-inflicted Bounty is Buh Bye’d (BB) before DRP 1, the Gunslinger does not gain 1CP.
4. If it is BB after this point, the Gunslinger still gets to keep the gained CP, but not the +1 dmg.

Location: Discord-base game rules discussions

Ruling Date: 8/13/2022

1.2. Interaction Name: Bounty and gaining CP (follow-up to above)

Situation: When exactly is CP gained? Can I somehow stop the Gunslinger from gaining the CP?

Ruling: Depends on timing (see examples below)

Scenario 1. No CP gained

Scenario 2. See examples

Scenario 3: CP is gained

Scenario 4: No CP from Bounty 1, yes CP from Bounty 2.

Long story short: The only way to deny the CP gained from a Bounty that is being inflicted by an ability that is also an Attack, would be to interrupt the effect of Bounty (i.e. gain 1 CP and add +1 dmg) from occurring by BB-ing it at the point of “Then” in the Offensive Ability Bounty Hunter activation.

Explanation: (Scenario 2 specifically is a very technical interpretation)

Scenario 1

1. Samurai already has Bounty
2. Gunslinger Attacks Samurai for 6 undefendable dmg
3. Samurai can ****BB**** Bounty at anytime up until the Samurai is successfully targeted to stop the Gunslinger from gaining 1 CP (due to the word “then” being ****Inflict Bounty. Then deal 1 undefendable dmg****)

Scenario 2

1. Samurai already has Bounty (Bounty 1)
2. Gunslinger Attacks Samurai with Bounty Hunter, which inflicts Bounty (Bounty 2) and THEN deals 1 undefendable dmg

Split A (BB at “then”)

- 3a. Samurai can ****BB**** Bounty 1 at anytime up until the Samurai is successfully targeted to stop the Gunslinger from gaining 1 CP from Bounty 1.

3b. If Bounty 1 is ****removed**** in this way, the Samurai will then be inflicted with Bounty 2 and the Gunslinger will deal 1 extra dmg and **gain 1 CP** from Bounty 2.

Split B (BB after “then”)

4a. Samurai waits until the Samurai is successfully targeted.

4b. The Samurai is now successfully targeted by an Attack. There are now two effects that are trying to occur:

1. Bounty 1 effect wants to resolve

2. Bounty 2 wants to be inflicted onto the Samurai

4c. the effect of Bounty 1 resolves FIRST (increase dmg by 1 and **gain 1 CP**) because it is a status effect (and is considered an Instant Action) while Bounty 2 being inflicted is from an Offensive Ability, which is not an Instant Action

-which on a tangent side note, is why you could play NTT and spend 1 CP before a Cursed Pirate steals your one CP, because NTT is an Instant Action speed effect and the effect of an Offensive Ability is not

4d. The Samurai is now trying to be inflicted with Bounty 2, which cannot be inflicted since he is already at Stack Limit.

4e. After the step 4d above, Samurai can now ****BB**** Bounty 2. This will mean that he will not receive +1 dmg, but there is no “takesies-backsies” on the 1CP that the Gunslinger gained from Bounty 1.

Scenario 3

1. Samurai has NO Bounty.

2. Gunslinger Attacks Samurai with Bounty Hunter, which inflicts Bounty and THEN deals 1 undefendable dmg.

3. Samurai plays BB on Bounty at the point of Then, because THEN creates a break in play at which cards and status effects can be played.

Scenario 4

1. Monk has Bounty (Bounty 1) and also has Cleanse AND BB.

2. Gunslinger Attacks Monk with Bounty Hunter, which inflicts a Bounty (Bounty 2) and THEN deals 1 undefendable dmg.

3. Monk can spend Cleanse at anytime up until the DRP 1 to remove Bounty 1.

4. The Monk can then play BB at the point of “then” to remove Bounty 2.

5. Since the Bounty has to have been inflicted on the Monk beforehand in order to be BB'd in the first place, Gunslinger will still gain 1 CP from Bounty 2.

6. 1 CP is gained by the Gunslinger, and no Bounty is on the Monk

Location: Discord-Gunslinger

Ruling Date: 10/29/2024 (updated 7/8/2025)

10. Samurai

1. Interaction Name: Back Strike and incoming damage

Situation: When exactly can I spend Back Strike?

Ruling: Whenever dmg is incoming from an Offensive Ability

Explanation:

1. The wording on the status effect has been adjusted from “spent whenever you receive dmg from an ORP” to “when you have incoming dmg from an ORP”
2. This was done to clarify that it can be spent at any point after dmg is considered to be incoming instead of only being able to be spent AFTER the Samurai has actually received dmg.

Location: N/A

Ruling Date: 11/28/2024

2. Interaction Name: Shame

Situation: When exactly does Shame get removed?

Ruling: At the end of the ORP

Explanation:

1. Per the Samurai leaflet, Shame should be removed once an Attack has been successfully activated
2. This would be during ORP Step 4.
3. *Note that Shame is an Attack Modifier, so it has no effect on the pure dmg type. So this means that it reduces dmg from both normal and undefendable dmg.*

Location: Discord-Samurai

Ruling Date: 4/29/2025 (updated 08/06/2026)

11. Tactician

1. Interaction Name: Profiteer and Cursed Pirate’s Cursed Passive Ability

Situation: A Tactician activates Profiteer and rolls a 6 against a Cursed Pirate who has flipped their Hero Board. Does the Tactician get inflicted with a Powder Keg from Cursed?

Ruling: No they do not get a Powder Keg.

Explanation:

1. A Tactician rolling a 6 on Profiteer grants him an additional ORP. This effect is determined during ORP 4.
2. Once this 6 has been rolled and successfully “activated”, what I will call “Offensive Roll Phase 1” is now completed, and the Tactician's new “Offensive Roll Phase 2” begins, starting at ORP 1.
3. Note that this means that there is no Targeting Roll Phase or Defensive Roll Phase. This is different than two other status effects (Stun and Combo) which grant an additional Offensive Roll Phase, because these two status effects are resolved at the conclusion of the Roll Phase.
4. The Cursed Pirate’s Passive Ability is supposed to activate/ “check for an Attack” during the Defensive Roll Phase. *This occurs during the first step of the Defensive Roll Phase (DRP1).* ~~This is also the same time where the Defender “checks” to see if they are being Attacked with defendable dmg, and are able to activate their Defensive Ability.~~

5. Since there is no DRP in points 2-3, then the Pirate's Passive cannot activate and no Powder Keg is received by the Tactician.

Furthermore, note that this Profiteer-ORP is a distinct new Roll Phase, and all status effect tokens that should be removed at the end of the Offensive Roll Phase (as in, Offensive Roll Phase #1) should be removed.

Location: Discord-Tactician

Ruling Date: 10/15/2024 (*updated 2025/10/23*)

Other rulings:

- The card Feigned Retreat cannot inflict Constrict upon an opponent who already has Constrict, because Constrict is not removed until the end of the *Roll Phase*
- If the card inflicts a new Constrict, that Constrict token will remain on the afflicted opponent until the end of their next *Roll Phase*.

12. Huntress

13. Cursed Pirate

1. Interaction Name: Cursed Pirate's flipped "Cursed" Passive Ability

Situation: What is an exhaustive list of ways my opponent gets a Powder Keg?

Ruling:

The Passive Ability inflicts a Powder Keg when an opponent does not activate an Attack.

Explanation:

1. Passive Ability DOES inflict a Powder Keg when opponent is:
 - i. Activating an Offensive Ability that deals only *collateral* damage (i.e. Tactician's Carpet Bomb)
 - ii. Activating an Offensive Ability that does not deal any damage at all (i.e. Tactician's Profiteer Ability if a "Flag" is rolled, and he only gains a total of 5 Tactical Advantage)
 - iii. Activating no Offensive Ability at all through
 - a. whiffing and being unable to activate an Offensive Ability, or
 - b. Rolling a 1-2 on the Blind status effect or a 1 on the Blinding Light status effect
 - c. choosing not to activate an Offensive Ability at all
2. Passive Ability DOES NOT inflict a Powder Keg when opponent is:
 - i. Activating an Attack (i.e. Tactician's Sabre Strike)
 - ii. Gaining an additional Offensive Roll Phase occurs from a handful of abilities/effects:
 - a. Tactician's Profiteer Ability if a "Medal" is rolled, and he begins a new Offensive Roll Phase and the Defensive Roll Phase does not occur at all.
 - b. Doctor Strange's Deja Vu status effect, as it ends the current Offensive Roll Phase and begins a new Offensive Roll Phase and the Defensive Roll Phase does not occur at all.

Furthermore, this Powder Keg is inflicted during the Defensive Roll Phase step 1

Location: Discord-none

Ruling Date: 10/22/2024

2. Interaction Name: Walk the Plank Ability

Situation: Can I change my choice between the two options “Steal 1CP” or “Opponent discards 1 card of their choice” if my opponent now used all of their CP/ played all their cards?

Ruling: No

Explanation:

1. The Cursed Pirate has to make the choice (above) during the Offensive Roll Phase step 4.

2a. During the Defensive Roll Phase step 1, their opponent may be able to spend their 1CP or 1 card in their hand (with a card such as “Double Up!” or “Not This Time”) because the Action card is an Instant Action and can interrupt the resolution of the Offensive Ability effect.

2b. This could mean that there is no longer 1CP to Steal/ 1 card to discard for their opponent.

3. The Cursed Pirate cannot go-back-in-time and change their choice if their opponent does this

Location: N/A

Ruling Date: 11/28/2024

3. Interaction Name: Parlay and Powder Keg

Situation: Does a player receive damage if 1) the Attacking Hero is inflicted with Parlay and 2) a second Powder Keg is inflicted by the Offensive Ability of the same Attacking Hero?

Ruling: Yes they still do receive 3 dmg.

Explanation:

1. The status effect Parlay reads that “a player with Parlay may not deal any damage as a result of their Offensive Roll Phase”

2. While a Powder Keg is being inflicted by the Attack, the 3 isolated dmg being dealt by the second-inflicted Keg is a part of the **status effect's** effect and not the **Offensive Ability**.

3. The portion reading “deal any damage” specifically refers to printed damage written on in the Offensive Ability that has been activated (such as the 7/9 dmg on Light the Fuse).

Location: Discord- Cursed Pirate

Ruling Date: 1/7/2025

14. Artificer

1. Interaction Name: Nanites and Nanobot activation

Situation: How is the damage from an activated Nanobot resolved when there are multiple players with Nanites? What type of dmg is it?

Ruling: Detonated Nanites on other players would be considered collateral dmg.

Explanation:

Updated summary for clarity below:

1. When Nanobot Detonates Nanites during the Upkeep Phase, dmg is dealt and accumulated with all dmg dealt during this Phase (other status effects such as Poison or Burn)

2a. When Nanobot Detonates Nanites during the ORP, treat Nanites as Attack Modifiers.

- So the dmg type becomes the same as the Attack being used (which could be either normal/ undefendable/ Ultimate depending on which of the 3 Attacks are activated)

2b. However, if Nanites are on an opponent who you are NOT attacking, those Nanites would be considered collateral dmg (as you cannot Attack multiple players in the same turn)

Original ruling:

1. Nanites were a status effect that had no clear way to describe their dmg type on the Artificer leaflet.

2. We used the red circles as they are primarily Detonated in the Upkeep Phase, and did not want people to think this dmg was defendable.

3. However, they can also be used during the ORP and added as an Attack modifier. For the Large Straight, this is now additional defendable dmg, which should be black circles.

Additionally, for the mini-Ult and Ult, this Detonation would also be undefendable, and could be red circles.

4. In the end, majority of instances are undefendable, so we used red circles.

5. Finally answering the question in a multi-player game, any additional instances of Nanites Detonating would be prime examples of special targeting rules for dmg (i.e. if you have a Nanite, they blow up and you receive dmg).

-. Therefore, consider the dmg to be collateral.

Location: Discord-Artificer

Ruling Date: 10/15/2024 (updated 2026/03/09 for clarity)

2. Interaction Name: Heal Bot Activation with Shame or Wither or Decrep-ify

Situation: Can Artificer still use Heal Bot if being attacked with a now reduced to 5 damage attack when it was reduced from 6 (or more) with Shame/Wither?

Ruling: ~~If the Attack's damage is at least 6 dmg, Artificer can use Heal Bot~~ No, Heal Bot can no longer be Activated.

Explanation:

1. If the Offensive Ability being activated deals 6 or more dmg, after including any modification to the Attack, *Artificer can Activate the Heal Bot.*

This includes:

- a. increases to the Attack dmg from Attack Modifiers (such as Crit adding +4 dmg) or
- b. decreases to the Attack dmg due to Shame or Wither,

1b. Note that this mean in the situation above, the Shame reduced the dmg of the Attack to 5 dmg (so no Heal Bot). However, if then an Attack Modifier is played (such as a status effect like the Samurai's Honor, or an Attack Modifier card like the Samurai's Follow Through), and the dmg is increased to 6 or above, then now the Artificer can activate their Heal Bot.

2. Heal Bot can still be activated if damage is prevented. For example, playing the card Not This Time! to prevent 6 incoming dmg does not now mean the Offensive Abilities initial dmg is 6 less.

Location: N/A (Discord-artificer)

Ruling Date: 12/3/2024 (updated for clarity 2026/1/3) (updated 2026/5/15)

15. Seraph

1. Interaction Name: Blinding Light activation

Situation: When exactly should you roll 1 die for the status effects Blind or Blinding Light?

Ruling: Roll for the Blind or Blinding Light right away, immediately after successfully activating an Offensive Ability

Explanation:

1. Roll for the Blind or Blinding Light right away, immediately after successfully activating an Offensive Ability aka once the ability is "locked-in" in ORP #4.

-If a 1-2 or a 1 is rolled, respectively, the entire Roll Phase fails and has no effect of any kind.

-Note that once the ability has been successfully activated and the Blind/Blinding Light is now to be rolled, you cannot alter the original Offensive Ability as this ability has been "locked in".

Location: Discord-Seraph

Ruling Date: 6/6/2024

2. Interaction Name: Blessing of Divinity and an opponent's Ultimate

Situation: How does Blessing of Divinity (BoD) interact with an Ultimate? Isn't removing the token an action that is being taken during an Ultimate (which is not allowed since no action of any kind can be taken by an opponent during an Ultimate)? What about isolated dmg?

Ruling: "Blessing of Divinity, for all intents and purposes, is a single status effect bestowed by the Dice Throne gods, to a few select worshippers of their teachings, (the Paladin and Seraph), that is the one single thing that can happen during an Ultimate to stop their followers (the Paladin and Seraph and their team members) from being defeated."

Explanation:

1. As has been one of the Golden Rules of Dice Throne, included on the front of every Heroes leaflet "no action of any kind can be taken by an opponent during an Ultimate". The only thing you can touch is your Health Dial and lower it by "X" dmg.

2. For a clear example, an opponent cannot spend Protect during an Ultimate, obviously.

3. The status effect BoD, as noted in the quick summary, it "Prevent(s from) being defeated".

4. As has been ruled in multiple places, including attempts to be clarified on the back of each Heroes leaflet who have this status effect, BoD is not affecting the resolution of an Ultimate in any way. The player who has BoD is not performing any action during this result, the BoD token is simply just stopping you from being defeated.

5. As a further clarification regarding isolated damage and BoD, example below,

A. if a Paladin who has 5 Health is being attacked with an Ultimate from Black Panther, who mid-Ultimate also reaches stack limit of Kinetic Energy and "bursts", dealing 5 isolated dmg to Paladin.

B. The Paladin would be reduced to 0 Health, (the dmg is isolated)

C. BoD would resolve its effect (Health set back to 1),

D. the Paladin would die from the remaining 11 dmg from the Ultimate.

Final ruling: While points 3-4 do both try to let the masses know that BoD still is triggered during an Ultimate, because it is not affecting the Ultimate in any way, it may still be viewed as unclear.

This status can trigger at any point during an Ultimate.

Location: Discord-Paladin and Seraph

Ruling Date: 8/16/2024

3. Interaction Name: Purify and a status effect being removed

Situation: How does the Seraph's Purify ability remove a status effect exactly?

Ruling: Purify Offensive Ability is not considered an Instant Action. Spending Status Effects is considered an Instant Action. Instant Actions can interrupt non-instant actions.

Explanation:

1. Per the Seraph's back of leaflet on Purify, you can spend a status effect before it is removed.
2. As an example, consider a Paladin who has gained all 5 of his status effect tokens. Once the Seraph has successfully activated the Ability and has chosen to target the Paladin, he could spend his Protect and Retribution tokens, meaning that the Seraph could only select his remaining Crit or Accuracy token during the DRP1 (Blessing of Divinity cannot be removed).
- 3a. In the same example, if the Paladin waits and then the Seraph targets the Paladin, who announces "I want to remove your Protect", the Paladin can interrupt the Seraph's ability (whose ability activation is not an Instant Action) and spend the Protect token (whose spending status effects is an Instant Action).
- 3b. The Seraph, now that the Paladin's interruption has been resolved, can announce a different token to remove, as their target token is no longer able to be removed.
4. As example 2 & 3 show, the Paladin should be able to successfully spend their Protect/Retributions at either point. There is no "a-ha! I have acted more quickly and it is now the DRP 1 and you can no longer spend those tokens! A-ha!" moment. The Paladin can also just choose to let his Protect be removed, and the card's effect ends there.

Location: Discord-Seraph

Ruling Date: 9/30/2024

4. Interaction Name: Blessing of Divinity on multiple Heroes in a team game

Situation: In a 2x2 match if two Heroes on the same team both have Blessing of Divinity (BoD) and that team is hit by a fatal blow, what happens?

Ruling: The next teammate in turn order would trigger their BoD. The next one would not resolve at all.

Explanation:

1. When the team's Health is reduced to zero, both Heroes now have tokens that want to be resolved simultaneously.
2. Per the end of the "Timing Conflicts" section and/or turn order resolution in the 3-4 player game mode section, turn order is used to resolve which Heroes BoD should trigger first.
3. After the first Heroes BoD would be successfully removed, the second teammates BoD would no longer have a valid use condition (as your team now has 1 Health) and therefore would no longer trigger at all.

Location: Discord-Seraph

Ruling Date: 10/1/2024

5. Interaction Name: **Blinding Light outcome 2-3 and multiple Roll Phases**

Situation: When rolling a 2-3 on Blinding Light, the text reads “any dmg they (the player who concludes their ORP) deal for the remainder of the Roll Phase is reduced by $\frac{1}{2}$ (rounded up). What would happen if that player gains additional Roll Phases? (see list of these effects in other section called “Multiple Roll Phases in one turn”)

Ruling: Only the *initial* Roll Phase is affected by this halving of dmg.

Explanation:

1. “The Roll Phase” mentioned in the token description is supposed to only be the first, initial Roll Phase.
2. The BL token is removed and its effect is resolved on a Heroes first turn, and should not affect any additional Roll Phases (Note: there are currently only a handful of ways for a Hero to gain additional Roll Phases)

The following two examples showing WHY the above ruling is the way it is. These two examples below ARE NOT how these interactions would be resolved in a game.

Example 1: Taken to an extreme example, if a Barbarian rolled a 3 on his Blinding Light roll after rolling four-6’s (his Crit Bash Offensive Ability) and ended up doing this same Ability 2 more times in a row, Stunning the Seraph multiple times, each one of these Attacks would be reduced to 2 dmg ($5 / 2 = 2.5 = 3$ dmg reduced).

- This would be very sad for the Barbarian, *and this is why Blinding Light does NOT affect multiple Roll Phases* .

Example 2: On a more mild situation, a Tactician rolling a 3 on his Blinding Light roll and then rolling 6 on Profiteer means that this “Profiteer”-ing ability would have its dmg halved (which zero dmg is dealt).

During this second Roll Phase, if he activates Sabre Strike for 6 dmg, this “Sabre Strike”-ing would not additionally be halved down to 3 dmg, as the BL token singularly affected the opening Profiteer. *Again, this is why Blinding Light does NOT affect multiple Roll Phases* .

In conclusion: Blinding Light only affects a single Roll Phase, this single Roll Phase being the one it is removed and rolled for.

Location: Discord-Seraph

Ruling Date: 2/13/2025 (updated 4/9/2026 for clarity)

16. Vampire Lord

1. Interaction Name: **Vampire Lord’s Blood Power and Bleed**

Situation: When and how do you gain the bonus Blood Power when an opponent has 2 Bleeds?

Ruling: Yes, if the opponent has 2 Bleeds by the end of the Roll Phase.

Explanation:

1. Per the updated leaflet, a Vampire Lord receives the "bonus Blood Power" if their opponent has 2 Bleeds at the end of the Roll Phase.

2. If a Bleed is removed prior to the end of the Roll Phase (i.e. Thick Skin 2, Buh-Bye, etc), the Vampire Lord does not receive the "bonus Blood Power"

Location: Discord-Treant

Ruling Date: 10/1/2024

2. Interaction Name: **Blood Power gained & Nyra receiving the dmg**

Situation: Huntress is inflicted with 2 Bleed tokens and Vampire Lord attacks her. Huntress sends all the dmg to Nyra. Does Vampire Lord gain a Blood Power at the end of her turn?

Ruling: Yes

Explanation:

1. Huntress and Nyra are considered one entity. If you deal dmg to Nyra, it is the same as if you dealt dmg to Huntress as far as any effects that need dmg to be dealt are concerned.

Location: Discord-base game rules discussion

Ruling Date: 8/12/2024

Holiday Box

17. Santa

1. Interaction Name: **Ho Ho Ho card and Cheer**

Situation: Can you spend Cheer tokens while in the middle of rolling for 1-3 Cheer after playing the Ho Ho Ho card?

Ruling:

Yes

Explanation:

1. As has been mentioned in many places on back of leaflets and with other Heroes, whenever you are about to gain more tokens, you can spend already-gained tokens to make room for the incoming status effects.

2. Therefore yes you can spend already-gained Cheer on the dice that are on your board during the roll of Ho Ho Ho.

3. You can also still re-roll the Cheer dice as dice may ALWAYS be altered (no matter the speed of the card or type of card)

Location: Discord-Santa

Ruling Date: 07/2/2024

18. Krampus

1. Interaction Name: **Bad Tidings**

Situation: Can an opponent play Getting Paid, etc mid-activation of Bad Tidings to remove all of their Coal? Does this reduce the damage of the ability to 0?

Ruling: Yes

Explanation:

1. In the example where an opponent is afflicted with 1 coal and Krampus activates Bad Tidings, inflicting 3 additional coal to stack limit, and the opponent plays Getting Paid (or spends a Sapling, a Tactical Advantage, or any other character-specific instant CP generation), this does cause the Coal effect to trigger due to the gain 1 CP and removes all of their Coal.

2. This is because these effects can be played at the point of “then” in the ability Bad Tidings.

3. This does effectively reduced the damage to 0?

Note: The Attack Modifier card Sproingy's Surprise calculates damage per Coal when played. An opponent cannot do the same “play” as point 1 above, because there is no “then” and they cannot interrupt the resolution of Sproingy's Surprise card.

Location: N/A

Ruling Date: 04/24/2025

Marvel

19. Miles Morales: Spider-Man

1. Interaction Name: **Swing Escape card**

Situation: Spiderman's Swing Escape card reads *“This card can be played after your dice have been rolled.”* Does this mean they can be played after their respective dice rolls are “locked-in”?

Ruling:

No

Explanation:

1. The clarification on the card was primarily to let players know that they do not have to play this card BEFORE they roll dice for their Defensive Ability.

2. The card can be played after the dice have been rolled, but must be played before the dice roll is “locked-in” because the card changes the actual “success” symbol of the Defensive Ability.

3. This means that it must be played before the Defensive Ability activation is “locked-in”, with the “locked-in” effect of “on Spider” symbol being the ability result and not “on Web” symbol.

4. This will allow an additional opportunity for dice altering rules, as normal.

Location: Discord-none

Ruling Date: 10/23/2024

2. Interaction Name: **Webbed and *normal* dmg becoming *undefendable* dmg**

Situation: When exactly does the effect of Webbed where the Attackers *normal* dmg becoming *undefendable* dmg occur?

Ruling: DRP 1

Explanation:

1. The first step of the DRP is “Resolve any effects from the Offensive Ability that require a target and are not damage related” (see image)
2. The effect of Webbed is not “damage related”, it is actually “damage-type related”. Therefore, it should be resolved at this point.
3. The next step, DRP 2, would then be skipped, as the Attacks dmg type is no longer defendable (no Defense may be made)

Note: A Timing Conflict issue can potentially occur at this point, as the Defender may want to play the Instant Action card “Buh Bye” to remove this Webbed token. This means that a status effect on the Defender wants to resolve (which is considered an *Instant Action*) at the same time that the Defender also wants to play the Instant Action card Buh Bye.

In this unique situation, the Buh-Bye will resolve first. The rationale is that the Defender could have played Buh Bye after the Attacker successfully locked-in their Offensive Ability (this would be during ORP 4)

Location: Discord-Miles Morales

Ruling Date: 10/25/2024

3. Interaction Name: Invisibility token timing

Situation: When exactly can I spend my Invisibility token? What if I wait until the end of my turn? Can I out-play my opponent so they cannot use Attack Modifiers, or can they out-play me to prevent me from using this token?

Ruling: During DRP and no (see below).

Explanation:

1. The token Invisibility reads as follows:
“When a player with this token is Attacked with an undefendable Attack, they may choose to spend this token to activate a Defensive Ability.”

Per the rulebook,

- 2a. DRP step 2 states that a Defensive Ability may be activated.
- 2b. DRP Step 3 states that the Defender performs 1 Roll Attempt
- 2c. DRP Step 4 states that based on the die results, all non-damage effects are resolved
- 2d. DRP Step 5 states “there is one last opportunity for any players to spend Status Effects or play cards”

3a. When spending this token, this does not automatically jump the current state of play forwards or backwards to the DRP Steps 2-4.

3b. Spending Invisibility simply means “activate a Defensive Ability (against an undefendable Attack)”. This can ****only be done**** after being targeted with an undefendable Attack (so it cannot be spent prior to the DRP step 1 as no target has been chosen/rolled for/ etc).

3c. Invisibility can be spent during DRP step 1 or during DRP step 5. At that precise point in time when spent, SM can “activate a Defensive Ability” (doing all normal defense steps including choosing which one to activate, performing one roll attempt, and resolving the effects).

3d. Invisibility cannot be spent after DRP Step 5 (as dmg has already been resolved and it is too late for any adjustments to be made to the Final Dmg Total).

3e. Also note that while SM's Defensive Ability is being activated as a result of a status effect, ****Rolled dice can always be altered by the other player**** including these dice rolled by SM's defense.

4a. A tangential note on undefendable dmg, you cannot out-maneuver SM who is trying to use Invisibility.

For example, in any instance when being Attacked with undefendable dmg and the Attacker says,

"I am Attacking with undefendable dmg, do you do anything? (like spending your Invisibility)" and the defender says

"no, I have no response",

this ****does not mean**** that you are now locked-in to DRP step 6 and dmg calculations.

4b. There is still DRP 5, which again noted above in point 2d., is where both players can spend status effects (like Invisibility) or play cards (like Not This Time for the Defender, or Attack Modifier cards or status effects like Rage for the Attacker)

4c. You cannot out-maneuver the Attacker or Defender to stop them from being able to play an Attack Modifier or defensive card or status effect.

4d. DRP 1 is where all effects from the Offensive Ability are resolved (such as inflicting negative status effects). DRP 5 is the final pass-pass-done.

Location: Discord-miles morales spider man

Ruling Date: 5/20/2025

4. Interaction Name: Webbed interactions

Situation: Would a player who already is afflicted with Webbed have this status effect resolve (be removed) if the Webbed player a. successfully Evades/ Smoke Bombs or b. has Shadows or c. the Attacker has Parlay?

Ruling: yes, yes, and ~~no~~ yes

Explanation:

1. As mentioned in a previous rules clarification, Webbed resolves during the first step of the DRP is "Resolve any effects from the Offensive Ability that require a target and are not damage related"

a. Evasive avoids incoming dmg. Damage would still be incoming, and if it were normal dmg would be changed to undefendable dmg due to Webbed. Webbed is removed.

b. Shadows specifically reads "when a player with this token is damaged as a result of an opponent's ORP, no damage is received and no defense is made". This means that the Attack does still succeed, but specifically states that no defense is made.

b2. To resolve, the Shadows-player needs to receive dmg. This means that previous normal dmg would certainly be changed to undefendable due to Webbed. Webbed is removed.

c. Parlay specifically reads "A player afflicted with Parlay may not deal any damage as a result of their ORP. This means that normal dmg would not be changed to undefendable dmg due to Webbed (since no dmg can be dealt at all), so Webbed is not removed.

After reviewing how Parlay works, and whether or not it is considered an Attack [which it is an Attack], Webbed would be removed. Following the example steps below:

- Was [Cursed Pirate] Attacked?

- Yes

- Is Spider man Attacking with **normal** dmg?

- Yes

- Is this still an Attack, so that the Cursed Pirate's Cursed Passive Ability does not activate (Which reads "if the opponent's Offensive Roll Phase does not result in an Attack, they are inflicted with Powder Keg")?

- Yes

- Does Spider Man get a Powder Keg?

- No it's an Attack

Therefore, by previously having Webbed not be removed, two conflicting things happened as:

1) Cursed Pirates Passive does not resolve as this is an Attack (= sad Pirate) but also

2) Webbed is not removed because it is not an Attack (= happy Miles Morales)

This makes the ruling consistently applied that the Attack does still occur.

Location: Discord-miles morales spider man (updated Discord-cursed-pirate)

Ruling Date: 7/3/2025 (updated 2026/05/15)

20. Scarlet Witch

1. Interaction Name: Jinx ability and rolling sixes

Situation: How does Jinx (base) and Jinx II work if Scarlet Witch keeps rolling only sixes (hypothetical-only, that only sixes are ever rolled)?

Ruling: Base Jinx caps at 9 dmg. Jinx 2 can keep rolling sixes forever.

Explanation:

1a. Jinx (base): On [symbol] means that the outcome can only ever occur once. With 2 sixes rolled, only 1 six is resolved, adding 1 dmg and re-rolling the die.

1b. If the next die roll is a 6, it does not trigger the "on six" effect again, as it has already resolved once i.e. "on". The same would happen if the initial outcome was 1 and 6, and then another 1 was rolled. The ability would add +1 from the six rolled, and only add +2 dmg from the "On warp" effect resolving once.

1c. Therefore, the maximum dmg from the base ability would be $6 + 1 + 2 = 9$ dmg

2a. Jinx II: All of the effects become "for each". This means that theoretically, there would be no limit to the dmg as infinite sixes could be rolled.

2b. Also, each "six" rolled would resolve, so if two of them are rolled initially, both would add +1 dmg and then the die would be rolled again.

Location: Discord-Scarlet Witch

Ruling Date: 10/7/2024

2. Interaction Name: Jinx dice modification

Situation: On her Jinx ability, can you play the following cards on the two dice that are being rolled:

a. Play Twice as Wild on one of the original dice and a die rolled again by a 6?

b. Play Samesies to change a die rolled again to match the value of one of the original dice?

c. Spend Probability Manipulation gained from the original rider roll to change a die rolled again?

Ruling: See below

Explanation:

a. No, the initial two dice, including one- 6, are resolved. The roll-this-die-again effect granted by rolling a 6 is a new die roll that could still be altered with a Twice as Wild, but the one other die could not also be altered.

a2. Without this logic, you could argue that a Twice as Wild could change the initial roll value of 6 that was rolled, creating a “chicken or the egg” scenario that breaks reality itself.

b. No you cannot. Per above, the roll-this-die-again effect granted by rolling a 6 is a new die roll. You cannot use Samesies to change the new die roll, to a 6 that was previously rolled that caused the new die roll in the first place. This first 6 is gone and is no longer “another one of your dice” for the purposes of the description on the Samesies card.

b2. Do note, if you had Jinx II and just rolled one-6 on the initial Jinx roll, you could play Samesies to now have two-6’s, now being able to do the “For each 6” rolled effect.

C. Yes you can. The gained Probability Manipulation is gained during resolution of the initial two-die roll (of exactly one-4 and one-6). It could be used on the new roll-this-die-again effect granted by rolling a 6 die, of course so long as the new result is an even number.

Location: Discord-Scarlet Witch

Ruling Date: 6/30/2025

3. Interaction Name: **Crackle dmg**

Situation: Do Unique Status Effects increase the dmg of Crackle?

Ruling: No

Explanation:

1. Only Positive and Negative Status Effects add 1 dmg for Crackle.

2. Unique Status Effects are neither Positive nor Negative Status Effects and do not increase Crackle dmg.

3. Note that all Unique Status Effects have a shape that is different than a standard “little circle” status effect token. Some exceptions to this rule are:

a. Miles Morales: Spider-Man Combo (whose leaflet was updated to change from Positive to Unique)

b. Marvel Dice Throne Missions: Shield (these are Positive even though they are small and shaped like a shield.)

c. Alchemist: Potions (these are Unique even though they are standard-size round tokens)

Location: Discord-Scarlet Witch

Ruling Date: 2/6/2026

21. Loki

1. Interaction Name: **Spellbound and flipping a Hero Board**

Situation: What happens if an Ability is Spellbound but then that Hero “flips over” their Hero Board? Do the tokens stay or are they removed?

Ruling: Spellbound is removed when the Hero Board is flipped.

Explanation:

1. Inflicted Spellbound tokens cover up the name of an opponent’s Offensive Ability

2. When a Hero Board is flipped, the named Offensive Ability that was being covered is no longer a usable Offensive Ability. For example,

- a Cursed Pirate’s named “X Marks the Spot” Offensive ability could be covered.
- Spellbound is specific to the ability “X Marks the Spot”

- When the Cursed Pirate's Hero Board is flipped over, that "same-place-on-the-Hero-Board" ability is now named "Dread Mark."
- This ability is different that "X Marks the Spot" and therefore should not be Spellbound

Other note: as noted on the back of the leaflet, an upgraded Offensive Ability is *still* Spellbound, because an ability named "Smack" changed to "Smack II" is still treated as being named "Smack".

Location: Discord-Cursed Pirate

Ruling Date: 11/19/2024

22. Thor

1. Interaction Name: Throwing/ Retrieving Mjolnir

Situation: When an ability reads "Throw or Retrieve Mjolnir", is this optional?

Ruling: No, it is mandatory

Explanation:

1. All effects that do not say "may" are required.
2. Note that abilities that read "Throw or Retrieve up to X [number of times]" includes 0, so for Thor's mini-ult, he could elect not to Throw Mjolnir.
3. If you have Mjolnir and activate an ability that reads "Throw Mjolnir", you must Throw Mjolnir.
4. If you do not have Mjolnir and activate an ability that reads "Retrieve Mjolnir", you must Retrieve Mjolnir.

Location: Facebook

Ruling Date: 7/9/2022 (updated 2025/01/24)

2. Interaction Name: Spending Guard Break

Situation: When exactly can Guard Break be spent to make my Attack undefendable?

Ruling: End of the Offensive Roll Phase

Explanation:

1. Guard Break description states "If a player concludes their Offensive Roll Phase with an Attack, they may spend this token"
2. The conclusion of the Offensive Roll Phase is after the final step #4 of the ORP section of the rulebook.
3. This is also why (per the back of Thor's leaflet) you cannot perform the usual "spend status effect being gained to make room for incoming status effects, since spending status effects is an Instant Action" that other Heroes can do (such as a Tactician being able to spend some previously-held Tactical Advantage to make room for incoming Tactical Advantage)

Location: N/A

Ruling Date: 11/28/2024

23. Black Panther

1. Interaction Name: Passive Ability and Thor throwing Mjolnir

Situation: If Thor activates his Ultimate and then throws Mjolnir during the Ultimate, is the 1 isolated source of undefendable dmg part of the Ultimate or separate?

Ruling: Damage being dealt is included with the Ultimate. Opponent cannot do ANYTHING. (besides lowering their Health Dial)

Explanation:

1. No action of any kind can be taken by the opponent during an Ultimate.
2. This includes being able to use your Energy Absorption Passive Ability to the 1 dmg being dealt by Mjolnir (even if Thor discards cards mid-Ultimate to throw/ retrieve his Hammer)
3. You can NOT prevent these 1 dmg pings (i.e. spending a Monk's Chi) or perform any other abilities related to the dmg (i.e. gaining 1 Kinetic Energy from Black Panther's Passive Ability)

Location: Discord-Black Panther

Ruling Date: 8/15/2024

2. Interaction Name: Kinetic Energy and Stun

Situation: Black Panther is hit with Crit Bash, does he gain Kinetic Energy from his passive or does the Stun prevent his passive from working?

Ruling: No KE is gained.

Explanation:

1. Stun prevents the use of any passive ability (as it prevents ALL abilities from being used, including Defensive Abilities).

Location: Discord-base game rules discussions

Ruling Date: 1/23/2023

3. Interaction Name: Mythic Ability activation

Situation: When exactly does Black Panther gain an additional Kinetic Energy (KE) ?

Ruling: see explanation below

Explanation:

1. The Active Ability is supposed to only work if Black Panther ALSO activates his Passive Ability
2. That is why the phrase "gain an additional Kinetic Energy" is written
3. if the total amount of KE gained is zero, then there is not a way to gain an additional KE (additional = 1 + 1 additional)
 - a. note that the other prerequisite for the Active Ability is that it has to be an Attack; therefore, if he were to receive (for example) 8 dmg from a Hero's Defensive Ability, it would not trigger.
4. As for another question regarding Black Panthers Mythic Ability, if an Attack's dmg was increased up to 10 dmg, then yes Black Panther would gain 2 total KE (as Black Panther IS being Attacked with at least 8 dmg)

Location: Discord-black panther

Ruling Date: 12/3/2024

24. Captain Marvel

25. Black Widow

1. Interaction Name: Upgrading an Ability mid-activation

Situation: What happens if you activate an Offensive Ability, but then choose to upgrade it after successfully activating it?

Ruling: The initial activated ability is what is resolved. Upgrading a base ability to the level 2 ability, after it has been successfully checked to be activated OR in the middle of it being activated, does not increase the amount of base damage of the ability

- i.e. Hacked deals 5 dmg.
- Hacked II increases the base dmg from 5 to 6.
- Hacked is what was activated, so only 5 dmg is dealt

Explanation:

1. Black Widow (BW) is a unique Hero in that she can upgrade her abilities during the Roll Phase instead of the Main Phase.

2. When BW chooses to activate an Offensive Ability, she is choosing to activate i.e. Hacked or Widows Gauntlets. If one of these abilities is upgraded to Hacked II or Widows Gauntlets II, you must still resolve the original activated ability

3. *Of note, BW likely could have upgraded the ability (e.g. Hacked to Hacked II) BEFORE she declares and successfully activates it. So this timing issue can mostly be avoided by upgrading the Ability before activating it.*

4. *Some of BW's abilities have the "if you have at least X Ability Upgrades in play" effects. Upgrading another ability (before ORP step 4) will still trigger these effects (i.e. if the Ability that was activated as per the above has such effects)*

Location: Discord-Black Widow

Ruling Date: 8/23/2024 (updated for clarity 1/6/2026)

2. Interaction Name: Elude card

Situation: Black Widows Elude card reads *"This card can be played after your dice have been rolled."* Does this mean it can be played after their respective dice rolls are "locked-in"?

Ruling:

No

Explanation:

1. The clarification on the card was primarily to let players know that they do not have to play this card BEFORE they roll a die for the status effect.

2. While this clarification is the exact same wording as the Miles Morales: Spider-Man's Swing Escape card, the other wording on the card of "you may play this card if the outcome of an Agility die roll is 5-6" is not very clear.

3. This card **cannot** be played after the die has been locked-in, because playing any card or performing any Action adjusts the current game state, and should allow an opponent to respond.
4. Note that this Elude card specifically states that “you may play this card (if the outcome of an Agility die roll is 5-6), meaning that the Agility die must show a 5-6 result in order to play this card in the first place.
 - I.e. the card could not be played on a typically spent Agility die roll (which succeeds on a 1-3) as the outcome is not 5-6 (As written on the card).
5. Therefore, playing this card **does** allow an opportunity for your opponent to alter the Agility die roll.
6. If the card **could** be played afterwards, it would create the following example of play:
 - "That Agility that I just spent, did not successfully activate because I rolled a 5-6 and not a 1-3?
 - Well, now I am going to play a card right now after the die is locked-in.
 - I now get to "go-back-in-time" and now say that it actually was successful, and avoid all of your damage."
 - This breaks 2 Golden Rules of Dice Throne, being that
 - a. dice can always be altered and
 - b. you cannot go back-in-time to alter a game state.

Location: N/A

Ruling Date: 11/30/2024

3. Interaction Name: Adding cards to your hand and shuffling your deck

Situation: What happens if Black Widow activates her Ultimate or Recon Offensive Ability, searches her deck for an upgrade, and then plays the Upgrade card right away to draw the top card of her deck before shuffling? The wording on these abilities both read “Search your deck for an Ability Upgrade and put it into play. Then shuffle your deck.” when effects like Double Up could be played at the point of “Then” because that is the rule of “Then”

Ruling: You must shuffle your deck first.

Explanation:

1. “Then” is not doing what it should. If a player were able to actually play a card such as Double Up! at the point of “Then”, they could technically search their deck, look at which cards are on top of their deck, and at that point decide to draw cards before shuffling.
 2. This is effectively cheating, because you are able to look at the top cards of your deck (or even recall from your Covert Ops status effect what the top 3 cards are) and use this knowledge to draw these cards before they are shuffled into your deck.
 3. The correct order of operations should be:
 1. Activate Ultimate or Recon.
 2. Search your deck and find and Ability Upgrade.
 3. Put the Ability Upgrade into play.
 4. Shuffle your deck.
 5. THEN draw cards from Red Room Passive Ability, play Double up and draw 2 cards, etc
- I will add a simplified version of this clarification to the errata in the advanced rules document.

*Bonus ruling: This same rule would apply to the Vampire Lord’s Ultimate Ability which reads “Search your deck for any 1 card. Put it into your hand and then shuffle your deck”. You cannot

look at the top few cards of your deck, now decide to play Double Up or spend 3 Blood Power to draw 2 cards, and THEN shuffle your deck”*

Location: Discord-Black Widow

Ruling Date: 6/24/2025

4. Interaction Name: Recon and Crimson Bands

Situation: Can Black Widow put an Ability Upgrade into play with their Recon ability while afflicted with Crimson Bands?

Ruling: No

Explanation:

1. Recon reads “Gain Agility. Search your deck for an Ability Upgrade and put it into play. Then shuffle your deck.”
2. Crimson Bands reads “a player afflicted with this token cannot play cards during their next Roll Phase”
3. For the same that Black Widow could not play i.e. So Wild or one of their Ability Upgrades in their hand during the Roll Phase, Black Widow additionally cannot “put into play” any cards.
4. Both of these effects, being “playing cards” or “put into play”, cannot occur when afflicted with Crimson Bands.
5. Black Widow would still gain Agility by activating this ability, and they are still able to search their deck, and they must still shuffle their deck, but they cannot put an Ability Upgrade card from their deck into play.
6. Note that Crimson Bands has no effect if Black Widow somehow just rolled five-6's naturally. Black Widow can put the 2 Ability Upgrades into play, as an Ultimate's effects cannot be reduced by status effects.

Location: Discord-Black Widow

Ruling Date: 5/13/2026

26. Doctor Strange

Doctor Strange: Rings of Raggadorr: Cast Effect: add the following words at the end of the following Cast effect sentence: “Cast up to two different *Spells* in your discard pile (excluding this one).”

- You cannot perform the Cast Effect of “Rings of Raggadorr” and target itself.
- Clarifies that there is no possibility of infinitely-casting *Spells*

1. Interaction Name: Deja Vu and Buh Bye! card

Situation: Can you spend your Deja Vu token in response to your opponent playing Buh Bye (BB) during your Roll Phase?

Ruling: For all Roll Attempts, Doctor Strange can spend the Deja Vu with priority before Deja Vu is BB'd

Explanation:

1. Per priority rules, the Active Player has priority if both players want to perform an Instant Action simultaneously.

2. Therefore, after Doctor Strange's opponent spends 2CP and places Buh Bye! On the table, Doctor Strange, with priority of timing for Instant Actions, can spend Deja Vu to end-and-restart his Offensive Roll Phase

- a. Note that this would allow the opponent to choose a new target for Buh Bye!.

Location: Discord-Doctor Strange

Ruling Date: 9/4/2024

2. Interaction Name: Doctor Strange's Spell interaction

Situation: If Strange prepares Fangs of Farallah (Fangs) which reads *a chosen opponent loses 1 CP*, against a Paladin who has exactly 3CP, is the Paladin able to spend the 3CP to draw a card (with their Tithe Passive Ability) before he loses this 1 CP from Fangs?

Ruling: He is not able to spend 3CP due to priority rules

Explanation:

1a. In the example, it is Doctor Strange's turn, and he has prepared the Spell Fangs, so he performs the Prepare effect of Fangs when the card is played.

1b. At the same time now, the Paladin wants to use their Tithe Passive Ability effect to spend 3CP to draw 1 card.

1c. Both players are trying to do their actions simultaneously (See section of rulebook for more detailed discussion on this topic).

1d. Since it is Doctor Strange's turn, they are the Active Player and they have priority, and can perform their action (which is the Fangs Prepare effect) first.

2. Note that, "at any time" in the Paladin's Tithe Passive Ability does not mean the same thing as it being treated as "an Instant Action". This "at any time" is just telling you when you can do it (the Main Phase, Roll Phase, during either players turn, etc).

3a. To further answer why this is different from two similar "lose 1 CP" effects that occur with either a. The Cursed Pirates Walk the Plank Offensive Ability or b. The Shadow Thiefs Pickpocket Offensive Ability, those two ability effects are "locked in" once the abilities are successfully activated and are being resolved.

3b. In between the time of the Cursed Pirate choosing the "steal 1 CP" effect or the Shadow Thiefs "1 CP may be stolen" effect, there is a window of time between this ability activation and the resolution of the effect for the Paladin to be able to perform their Tithe effect of spend 3 CP to draw 1 card.

- both of these "steal-lose CP" effects would resolve in the DRP 1 step.

- so specifically, the Paladin's timing window is to Tithe-draw during the ORP 4 step.

Location: Discord-Doctor Strange

Ruling Date: 11/10/2025

Marvel X-Men

27. Cyclops

28. Gambit

29. Rogue

1. Interaction Name: Gaining Ionic Energy

Situation: When exactly do I perform the Rogue's Passive Ability Ionic Drive and gain Ionic Energy 2 or 1?

Ruling: After Attack damage has been successfully dealt.

Explanation:

1. As noted on the back of her leaflet, she will not receive an Ionic Energy at all if she prevents all incoming damage.
2. If she is being Attack for 8 dmg, but then prevents 2 incoming damage, she will end up successfully receiving 6 damage and only gain an Ionic Energy 1
3. The number type Ionic Energy gained should be calculated on how much you manually reduce the Health on your Health Dial.

Location: N/A

Ruling Date: 5/12/2025

2. Interaction Name: Ionic Intensity and Southern Belle

Situation: How exactly are the Ionic Energy [1] and [2] tokens gained if I would exceed Stack Limit? Can you just choose to gain the Ionic Energy [2] ones first?

Ruling: Gain in any order you want.

Explanation:

- 1a. Per the resolving text section of the rulebook, you "roll the indicated number of dice a single time, then resolve the effects that follow".
- 1b. This means that all effects that have been rolled for with these dice are gained/ added/ etc. After any dice manipulation by either player, you now have all of these effects queued up.
- 1c. For simplicity, we say just resolve from top to bottom, because the alternative is that you could just jump around, possibly losing track of which effects you have already resolved or that need to still be resolved.
- 1d. This is also why die icons on cards and abilities are shown in descending order (e.g. die icons on your numbered 1-2-3 dice are shown first, then the ones on the 4-5 dice, then the 6)
- 2a. Previously, there was never an issue with the order of resolving the effects (such as the provided rulebook example).
- 2b. However, there may be a Stack Limit issue with Rogue's cards Ionic Intensity and Southern Belle, as she can gain one of two different values of the same status effect type.
3. As mentioned in point 1, a player has earned all of the effects that were rolled for, and you are just resolving which are gained.

4. For Rogue, if she would gain an amount of Ionic Energy (IE) over its Stack Limit when resolving these cards, she can gain them in whichever order she wants.

5a. For example, if she already had three IE [1] tokens and rolls 1 [touch] and 3 [soar] icons with her Ionic Intensity card, she will resolve that she has 1 IE [1] and 3 IE [2] tokens that can be gained.

Imagining this visually, these 4 tokens are taken from her Hero Leaflet, and are now floating above her head, waiting to be placed on to her Hero Board. However, she can only gain 2 of these tokens

5b. She can choose to gain 2 of the IE [2] tokens (as the Stack Limit is also increased to 5), and the remaining 1 of each value would not be gained because she has reached Stack Limit.

5c. She now has a total 1 IE [1] and 4 IE [2] tokens.

5d. As clarified on the back of her leaflet, she cannot choose to gain the third IE [2] while at stack limit by replacing a IE [1] token with this new IE [2] token.

Location: Discord- Rogue

Ruling Date: 7/15/2025

3. Interaction Name: Resolving Influence (Rogue) and Deja Vu (Doctor Strange)

Situation: If Deja Vu is used before or after Influence dice are rolled for, what happens to the Influence tokens? Do the fewer Roll Attempts remain across different ORPs, or just the first ORP but the number of Roll Attempts "restart" with the new ORP.

Ruling: If Deja Vu is spent, any Influence's effects do not have any effect on this new ORP.

Explanation:

1a. The description for Influence reads "a player afflicted with these tokens must roll 1 die at the start of their ORP per token. For every 1-3 rolled, they get one fewer Roll Attempt. Then remove all of these tokens."

1b. The description for Deja Vu reads "instead of activating an Ability, a player with this token may spend it to conclude their current ORP and then start a new ORP"

2a. If Doctor Strange resolves Influence as normal, and receives fewer Roll Attempts, after he completes his **1-2-3 Roll Attempts**, he can spend Deja Vu to start a new ORP.

2b. This new ORP would not be affected by Influence as they were already rolled for and removed at the start of this current ORP.

3a. The clarification is what happens if he completes **0 Roll Attempts** i.e. spends Deja Vu either i) before rolling for Influence at all, or ii) after rolling Influence and losing all 3 Roll Attempts

3b. In both situations, the answer is the same; the Influence effects are applicable to only the first ORP, so they should be removed.

3c. Note that in scenario 3ai., Doctor Strange is preemptively spending Deja Vu before seeing if they lose any Roll Attempts to begin with, so this is a *poor use of Deja Vu by Doctor Strange* (they should see if they lose any Roll Attempts at all first!).

3d. Also note, regarding whether the card Buh Bye could be used during 3ai or 3aii:

- Rogue could certainly have played Buh Bye on Deja Vu before the start of the ORP.
- With current priority rules, if Rogue waits until the start of the ORP, Doctor Strange now has priority for playing Instant Actions since they are the active player
 - similar to above this is a *poor use of Buh Bye by Rogue*. (they should have played Buh Bye earlier!).

In the end, Deja Vu is resetting Doctor Strange's ORP, so he can avoid these negative effects.

Location: Discord - Rogue

Ruling Date: 09/03/2025

30. Jean Grey

31. Iceman

Dice Cube and the Manifest Die clarifications in Psylocke section

1. Interaction Name: Multiple damage types with other effects

Situation: How exactly should the two damage types (undefendable and collateral) from Iceman's HAIL THE KING ability be dealt with if his opponents uses the following items; Not This Time, Protect, Evasive, Artificer's Healbot, Rogue's Passive Ability (Ionic Drive), a Defensive Ability (via SpiderMan and Invisibility)

Ruling: Basically, all dmg is still queued up as normal and applied all at once.

Explanation:

1. The ability deals 5 undefendable dmg plus 2 collateral dmg to all opponents. This is a total of 7 incoming dmg to the "Defending" player, and 2 dmg to all other opponents (if any). All of this dmg is added together and applied simultaneously at the conclusion of the Roll Phase.

a. Not This Time: Prevents 6 of the 7 incoming dmg.

b. Protect/ Agility/ Blinding Light (preventing half)/ Illusion (preventing half): Prevent $7/2 = 3.5 = 4$ incoming dmg

c. Evasive/ Smoke Bomb: Prevents 7 of the 7 incoming dmg.

d. Artificer's Healbot: Both Heal Bot prerequisites are satisfied. 1. He is being Attacked, and 2. There is at least 6 dmg (incoming). Therefore, it can be activated.

e. Ionic Drive: Same as above; 1. Dmg is successfully being dealt to Rogue from an Attack, and 2. The dmg is 7 or higher. Gain Ionic Energy 2.

f1. Spider-sense Defensive Ability (via Invisibility token being spent): This is the only tricky one. We have very sparingly ever had two separate dmg types on a single Offensive Ability, that is not an isolated source (where isolated damage would be dealt immediately and separately from the dmg total). (the other one is the Pyromancer's Mini-Ultimate ability which does the same thing, but also inflicts Stun which prevents any opponent response).

f2. Per the written defensive ability effect, "On (Spider), prevent $\frac{1}{2}$ dmg". This will be the total incoming dmg of $7 / 2 = 3.5 = 4$ incoming dmg.

f3. Even though collateral dmg is not "defendable", the 2 dmg is still added to the final dmg total. In summary, this *Offensive Ability's* incoming dmg will be 7 as all the dmg is queued up and applied simultaneously at the end of the *Roll Phase*.

Update:

3. If Huntress is Attacked with this 7 dmg, Nyra could receive all 7 of the incoming damage. This is because the dmg is all queued up and applied simultaneously, including the collateral dmg

4. If the Huntress was not Attacked, but is just supposed to receive the "2 collateral dmg dealt to all opponents", then Nyra could not receive this dmg (as Nyra cannot receive collateral dmg per the rules clarification on her leaflet and rule pop)

Location: Discord-Iceman

Ruling Date: 8/30/2024 (updated 12/16/2024)

2. Interaction Name: Basic Attack and “Then”

Situation: How exactly does the “then” work for his Frostbite (Basic Attack) Offensive Ability?

Ruling: Like normal (see explanation below)

Explanation:

1a. First note, this “then” is a separate and distinct sentence from the “on 4-of-a-kind (#’s), Store 1 Ice Shard in The Freezer”.

1b. This means that you do not need to successfully roll 4-of-a-kind in order to transfer out of The Freezer. (You can activate any of the 3/4/5 Ice symbols of Frostbite and still be able to transfer any tokens stored in The Freezer to your Hero Board)

2a. The “then” used is specifically noted AFTER the damage in the Offensive Ability. As clarified in the Advanced Rules document in the KEY TERMS section regarding “then”, the text after “then” resolves after normal damage calculations (see screenshot from this section of 4a in the Then section for examples) .

2b. You are still able to spend a previously-Stored Glide that is transferred out of the Freezer (as it is still the conclusion of the Defensive Roll Phase)

2c. You cannot use any previously-Stored Ice Shard if you use the card Ice to Meet You (which adds 1 dmg to your Attack per Ice Shard).

Location: Discord-Iceman

Ruling Date: 2/14/2025

3. Interaction Name: Dice Cube’s effect

Situation: Dice Cube stops a player from altering their lowest value. Can you still use this die for other purposes later in the Roll Phase (i.e. for an Attack Modifier card where you would roll 5 dice, or if an Offensive Ability effect makes you roll 5 dice)?

Ruling: Yes you can still roll this die for other purposes (see below, point 3 is an example).

Explanation:

1a. This die that is “frozen” is only “frozen” for trying to activate an Offensive Ability with your 3 Roll Attempts during your Offensive Roll Phase.

1b. The important words in the status effect description are the words “re-rolled” and “Roll Attempt”.

1c. These words were supposed to indicate that this die is only “frozen” for Roll Attempts, with the word re-roll further pointing to the additional two re-rolls a.k.a. Roll Attempts that a Hero typically has.

2. These tokens are removed at the conclusion at the Roll Phase to remind a Hero that their die/dice ARE “frozen”. The alternative was to have this token removed when a die is “Frozen”, but then it is very easy to forget the status effect is ongoing, and an opponent cannot easily see that one of your die is “frozen” (because they can look over and see you still have a Dice Cube status effect token on your Hero Board)

3a. A comparable example given above includes when a Moon Elf rolls their 5 dice for the Defensive Ability, but then wants to interrupt its resolutions and spend an Evasive token. They would simply take one of their 5 dice that were rolled, remembering that it was i.e. a 6, and after rolling and resolving the Evasive die roll, would place it back as a 6 to resolve with their Defensive Ability.

3b. Similarly, if you really wanted to, you could pick up the “frozen” die (which lets say is a 1) after playing a card that makes you roll 1 die for some effect (such as Ho, Ho, Ho). After resolving that card effect, place the die back to a 1, and it still cannot be altered by any means

Location: Discord- Iceman

Ruling Date: 2/14/2025

32. Psylocke

1. Interaction Name: **Paralyze and Molecular Acceleration and Potion**

Situation: Can Gambit's Molecular Acceleration be stopped by the status effect Paralyze?

Ruling: They are not stopped by Paralyze.

Explanation:

1. Accelerate means to "fill up" slots.
2. While Molecular Acceleration tokens are Unique Status Effects, these are not "gained" like normal status effects.
3. *Same ruling for the Alchemists Potions, which are Attached and not "gained" like normal status effects.*

Location: Discord-Psylocke

Ruling Date: 5/30/2024 (update 05/11/2026)

2. Interaction Name: **Paralyze and the Freezer**

Situation: Can Iceman's Ice Shards that are to be Stored in the Freezer be stopped by the status effect Paralyze?

Ruling: They are not stopped by Paralyze.

Explanation:

1. Per the Freezer card, tokens are just taken from the leaflet and are not "gained" like normal status effect.
2. They cannot be interacted with in any way, such as converting the 5 Ice Shards into 1 Glide would not be prevented by Paralyze.

UPDATED: Rules as Intended: Paralyze does not affect Glide's or Ice Shards being taken out of the Freezer

Rules as Written: The Freezer - Rules card (back of the card) specifically mentions in the third paragraph that "tokens here are not "in play". The i.e. includes that "...[these tokens] cannot be interacted with" which includes Paralyze attempting to interact with transferred-out tokens from the Freezer.

I concede that this "not in play" wording is confusing, as this also technically applies all of the status effect tokens on your Hero leaflet which are also "not in play" (as they are waiting to be inflicted or gained from your cards or abilities).

However, the Freezer is a special component that has a specific set of rules on the back of the card.

Final Ruling: While Iceman is afflicted with Paralyze,

a) you CAN transfer out Shards and a Glide from the Freezer

b) you CAN spend 5 Ice Shards on your Hero to gain Glide (as these Ice Shards are on your Hero Board and explicitly says "...to gain Glide"); however, spending 5 Ice Shards to gain Glide has nothing to do with the activated Offensive Ability, which is how Paralyze stops status effects.

Location: Discord-Psylocke

Ruling Date: 5/30/2024 (updated 2025/02/07)

3. Interaction Name: Paralyze and Cursed Doubloons

Situation: Can Cursed Pirate's Cursed Doubloons be stopped from being inflicted by the status effect Paralyze?

Ruling: Yes they can stop from being inflicted.

Explanation:

1. Paralyze description reads "A player afflicted with this token cannot gain or inflict any status effects associated with any of their Offensive Abilities"
2. Cursed Doubloons (CD) description reads "These Persistent tokens may not be moved or removed from any player except as a result of abilities on the Pirate's Hero Board"
3. In this case, Paralyze stops the Cursed Pirate's Offensive Ability from gaining or inflicting a CD in the first place, which is different from these CD tokens being moved/ removed.

Location: Discord-Barbarian

Ruling Date: 9/20/2024

4. Interaction Name: Dice Cube and the Manifest Die

Situation: Dice Cube (DC) stops a die from being altered in any way. The Manifest Die (MD) cannot be altered in any way. How do these interact with each other?

Ruling: See detailed explanation below

Explanation:

- 1a. The first clarification is whether the MD can replace a DC'd die at all, because DC says that you cannot alter the lowest die rolled.
- 1b. As will be shown in below examples, the answer to this question is that "*replacing a die* used during your ORP" is **different than** "*alter[ing] a die* by any means," with examples of altering a die being the use of cards like SO WILD or TIP IT (which again cannot be used on the DC die).
2. The second clarification is exactly how DC affects the MD once it is swapped in.
 - 2a. Per it's status effect description, Dice Cube(s) can only affect dice that were rolled as a part of a Hero's "first Roll Attempt".

*fun note: this WILL include any additional "Tornado" dice rolled by Storm
 - 2b. (see both images in message on Discord) The MD is rolled as a part of your first Roll Attempt during your ORP.
 - 2c. However, the MD cannot be altered in any way except a card or ability that specifically mentions "Manifest Die".
 - 2d. For Dice Throne Adventures fans, this Manifest Die wording is similar to how the twenty-sided Loot Die is interacted with. It cannot be affected by effects that roll "any die", with Loot cards referencing exactly "roll the Loot Die", and is why you cannot So Wild or re-roll this Loot Die.

Below are specific examples between a single DC status effect token and the MD.

In all examples, assume that Psylocke rolled the following on the first Roll Attempt: 2, 2, 3, 4, 5, with a 1 on the MD.

Example a. MD not used to activate an Offensive Ability

- DC affects one of the "2" results rolled. It cannot affect the "1" rolled on the MD because DC does not specifically mention "Manifest die".
- For the remaining 2 Roll Attempts that are used, the "2" is simply set aside and cannot be altered in any way.
- The "1" on the MD is just used to add +1 dmg on the activated ability

Example b. MD swapped with one of your other dice on the FIRST Roll Attempt

- DC affects one of the "2" results rolled. It cannot affect the "1" rolled on the MD because DC does not specifically mention "Manifest die".
- the "1" on the MD is swapped with EITHER of the "2" die, with Psylocke trying to activate her Large Straight ability (1-2-3-4-5).
- DC now affects the "1" rolled, because it was a. Rolled as a part of the first Roll Attempt (see DC description) and b. The MD is now treated as if it is one of your 5 normal dice (see MD description)
- if any dice manipulation occurs after this point, note that this "1" is DC'd and cannot be altered.

Example c. MD swapped with one of your other dice on the SECOND or THIRD Roll Attempt

- works exactly the same as example b. above. The "1" on the MD should now be treated as if it is one of your 5 normal dice, and would be DC'd or "Frozen" and cannot be altered.

3a. Any further confusion regarding how to track whether a SECOND or THIRD Roll Attempt MD swap-in should be straight forward.

3b. Any previously DC'd die that is being swapped out for the MD or these Roll Attempts would not have been rolled (per the normal rules for Dice Cube), so any issues would only occur if the MD value is equal to or less than this previously-DC'd die. This would be resolved immediately upon swapping, as the swapped-in MD is now the lowest die that was rolled as a part of the first Roll Attempt.

Location: Discord- Psylocke

Ruling Date: 2/19/2025

5. Interaction Name: Paralyze effect

Situation: If a Santa with Paralyze uses Naughty or Nice and the opponent is naughty, does the opponent still gain Cheer? How about other players gaining status effects from abilities in a 2v2 game, like the Ninja's Smokescreen ?

Ruling: No, the opponent does not gain Cheer.

Explanation:

1a. As per the status effect description, Paralyze reads that a player cannot gain or inflict any status effects associated with their Offensive Abilities.

1b. This means that any version or variation of the words "gain status effect" or "inflict status effect" written in an Offensive Ability should be completely ignored.

1c. This does mean that Santa cannot give a Cheer to his opponent, because "gain Cheer" is associated with the Naughty or Nice Offensive Ability.

2. Furthermore, the wording of Paralyze does not mean that exclusively the player with Paralyze is unable to gain status effects i.e. that you could instead have a teammate gain status effects instead of yourself (if your ability were to read “a chosen player gains status effect X”).

2b. For example, Ninja’s Smokescreen Offensive Ability reads “A chosen player gains Smoke Bomb and 2 Ninjutsu. A chosen opponent is inflicted with Delayed Poison”

2c. If the Ninja is Paralyzed, all of the above mentioned Positive and Negative status effects ****are associated with**** the Smoke Screen Offensive Ability. So neither the Ninja nor any of their teammates can gain these Positive effects.

2d. This is similar to how none of her opponents would be able to be afflicted with the Delayed Poison. You have multiple opponents who could be afflicted with Delayed Poison, which Paralyze stops from being inflicted. Having the supposed option that you could not choose yourself to gain a Positive status effect, but that you could choose a teammate, is incorrect.

Location: Discord-Psylocke

Ruling Date: 6/30/2025

33. Storm

1. Interaction Name: Wind Shear

Situation: When exactly can I spend the Wind Shear status effect?

Ruling: Varies (see below).

Explanation:

1. Wind Shear states that it can be used “when being Attacked”

2. This means that:

~~a. It cannot be used if opponent is afflicted with Parlay (because there is no Attack.)~~

a. *It can be used if the opponent is afflicted with Parlay (because there is an Attack.)*

b. It can be used alongside other dmg prevention, and or evasion/etc.

c. It can be used if you have Shadows, with your opponent still receiving the 2 dmg (while not preventing the 2 dmg)

Location: Discord-Shadow Thief

Ruling Date: 5/15/2025 (updated 5/4/2026)

34. Wolverine

35. Deadpool

1. Interaction Name: Mirror Match and RPS

Situation: What happens when one Deadpool uses their Shoot card, but the second Deadpool wants to now play their Shoot card?

Ruling: Can’t second shoot!

Explanation:

1. The second Deadpool cannot play their Shoot card after the first player has flipped their first card.

Location: Discord- Deadpool

Ruling Date: 02/24/2025

If Storm steals Deadpool's dice using tornado, can Deadpool use onomatopoeia to change the dice? NO, the die is considered Storm's die and not Deadpool's.

Outcasts

36. Pale Lady

37. Raveness

1. Interaction Name: Nevermore die roll and Feathers

Situation: When rolling the Nevermore Die Roll, can you interrupt the rolled result of a "6" to spend 3 Feathers to Activate Nevermore (which would mean that the 6 cannot resolve and I get Nevermore back)

Ruling: You cannot interrupt the Nevermore Die Roll with spending a different status effect or Companion effect (see below)

Explanation:

1. Nevermore is a Companion. While only implied in older versions of the rulebook, Companions should be treated the same as status effects in regards to timing and resolving any timing conflicts.

2a. When Nevermore is used during the opponent's Upkeep Phase to perform the Nevermore Die Roll (and it's various effects), this die rolling is considered exactly the same as if you were i.e. rolling for the Evasive status effect.

2b. In the above example, once an Evasive has been rolled, it is now too late to try and "Buh Bye" the status effect.

2c. Its activation also cannot be interrupted by other status effects (such as spending a second Evasive while you are resolving the first one).

2d. However, you can still affect the die roll outcome with cards or effects (such as Tip It)

3. Back to the initial question,

YES you can spend 1 Feather to force the Nevermore Die Roll to be re-rolled (see 2d above)

YES you can spend 2 Feather to increase or decrease the value of the Nevermore Die Roll by 1 (see 2d above)

NO you cannot spend 3 Feather to Activate Nevermore (see 2c above)

Location: Discord- Raveness

Ruling Date: 1/17/2025

Update:

Nevermore is a Companion and the Action cannot be interrupted (except for Dice modifications)

As an example, this means that an Instant Action Getting Paid! Cannot be played in the middle of resolving the Nevermore Die Roll. It must be spent BEFORE performing the Nevermore Die Roll!

2. Interaction Name: Hex and Targeting Roll Phase

Situation: What happens when the opponent is afflicted with Hex and rolls a “6” during the Targeting Roll Phase (in a 2vs2 game or other game mode with a Targeting Roll Phase)

Ruling: Roll the die again.

Explanation:

1. You must have a target for your Offensive Ability. Roll the die again.
2. The Hexxed player has already had their Offensive Roll Phase with not being able to activate any abilities with a 6 in them.
3. Also tacking on that their Attack fails because there is no target is another sad outcome.
4. The 6 result will not be able to occur, so in a 2vs2 game, this still means that the Raveness' opponents will not be able to choose the target of the Hexxed player's Attack.
- 5a. This interaction is currently a Raveness-Hex-only question, so this clarification will go in the Raveness section.
- 5b. I will update the rulebook section in a future version run, likely saying something similar to “you must have a target”

Location: Discord- Raveness

Ruling Date: 12/2/2025

3. Interaction Name: Spending Feathers.

Situation: Can a transferred Feather be used on an opponent's Nevermore Die Roll? How about in a Raveness mirror match (Raveness versus Raveness)

Ruling: Depends. See below.

Explanation:

1. The first question, related specifically to a not-Mirror Match, is that if [non-Raveness Hero] transfers a Feather from the Raveness to themselves, yes they can spend the single Feather on the Nevermore Die Roll that they are rolling during their Upkeep Phase (to re-roll the die)
2. The other Rules Clarification noted above is specific to Raveness Mirror Matches (which is why it's under that section of her Rules Clarifications).
 - Raveness 1 can only use their Feathers on the Nevermore Die Roll that Raveness 2 rolls for during Raveness 2's Upkeep Phase.
 - this is because this is Raveness 1's Unique Nevermore Dial
 - Ditto for Raveness 2 using Feathers during Raveness 1's Upkeep
 - If Raveness 1 transfers a Feather from Raveness 2 to themselves, this Feather is now Raveness 1's Feather.
 - Raveness 1 can still only use this Feather on the Nevermore Die Roll that is rolled by Raveness 2.

I will re-format this discussion above and post it in the Advanced Rules and Clarifications document.

Location: Discord-Raveness

Ruling Date: 1/26/2026

38. Headless Horseman

1. Interaction Name: Transferring Grim Pursuit

Situation: Which of the two Grim Pursuit effects can my opponent use?

Ruling: Both! But 1 has no effect.

Explanation:

1. Per the back of the Headless Horseman leaflet, "Since Grim Pursuit requires a [horseshoe die icon] to be effective, it has no effect if spent by a player other than the Headless Horseman"
- 2a. This "no effect" is specifically referring to the one "Attack Modifier" effect of a spent Grim Pursuit, as your opponent will not have a "horseshoe die icon] to be able to add extra dmg.
- 2b. Note that this is different than some other status effects, like the Ninja's Ninjutsu, which activate when a specific number is rolled on a die.
3. The other "Perform an additional Roll Attempt during your Offensive Roll Phase" can still be activated if an opponent transfers Grim Pursuit to themselves.

Location: Discord-Headless Horseman

Ruling Date: 2/2/2026

39. Necromancer

1. Interaction Name: Unearth card and Spellbound status effect

Situation: How does the Unearth card (UC) work with the status effect Spellbound (SB)?

Ruling: Varies depending on where it is; see below

Explanation:

- 1a. If an Offensive Ability is already covered by the UC, it cannot also be SB (no ability name to is able to be covered)
- 1b. If an Offensive Ability was already covered by the SB, and is then later covered by the UC, the SB is still removed at the end of the Offensive Roll Phase.
- 2a. If an Offensive Ability is already covered by the SB, it can later be covered by the UC (meaning it effectively is double-cannot-be-activated)
- 2b. You can still gain Corpses when you place your UC on a SB ability.

Location: Discord-Necromancer

Ruling Date: 10/23/2025

Vanguard

40. Druid

WIP

41. Forgemaster

1. Interaction Name: ORE cards and Crimson Bands status effect

Situation: Does Crimson Bands (Doctor Strange) affect a Forgemaster's ability to Mine for Ore cards? Or from performing his Ore card Scrap Effects?

Ruling: It does not. see below

Explanation

1. a previous and similar ruling made, was that Doctor Strange can still "Cast a Spell [card]" even if he is afflicted with Crimson Bands. This was because the words of "Cast a Spell" was ruled as not being the same as "Playing a card" (with Playing a Card examples being like playing Buh Bye, Not This Time, So Wild, etc from a player's hand)

- Crimson Bands ****does not**** stop Spell cards from being Cast

- 2. per the given ARC example above, the wording on Black Widow's Recon Offensive Ability of "Put [upgrade card] into play" was ruled as being stopped by Crimson Bands, because the words of "Put into Play" was ruled to be the same as "playing a card"

- Crimson Bands ****does**** stop Upgrades from being put into play

- 3. Rage cards were not ever an issue with Crimson Bands, as the Rage status effect just had the cost of "discard a card", and this is certainly not the same as playing a card. Rage cards just had an effect when they were discarded by Wolverine.

- Crimson Bands ****does not**** stop Rage cards from being discarded/ having their effects resolve

- 4. the new Forgemaster issue, is actually that TWO POSSIBLE THINGS could be happening when the Forgemaster is afflicted with Crimson Bands:

a) if Mining should be considered playing a card, as Mining [ORE cards] **places** these cards on to the Forge Passive Ability (which one could argue, is that these cards are also "Put into Play" like Black Widow's Offensive Ability), and

b) if performing the Scrap effect should be considered playing a card, as performing a Scrap Effect from the Forgemaster's Passive Ability

For both examples 4a and 4b above, the ruling will be the same: Crimson Bands ****does not**** stop their effects.

- First, the effects of "Mining" follow the same ruling as Doctor Stranges "Cast a Spell", and also has the specific wording of "look at the top 3 cards of your deck, and place [an ORE card] on your Passive Ability, with none of the wording actually saying "play an ORE card" or "put into play". Furthermore, this is a distinct difference than Black Widow who can "put [an Upgrade] into play"

- Crimson Bands ****does not**** stop Mining from happening (from his Passive Ability the Mines, or from his Good Haul Offensive Ability)

- Second, the ORE card effect of "Scrap[ing]", follow the same ruling as Doctor Strange's "Cast a Spell", as it is a key word phrasing that is noted on his leaflet (same as Doctor Strange) of "choose an ORE card and perform the Scrap effect"

- Crimson Bands ****does not**** stop a Scrap Effect from being performed

42. Duelist

WIP

43. Sun Elf

Solo Released Hero

101. Alchemist

1. Interaction Name: Potions and Hero Upgrades

Situation: What happens if I have an Attached Potion, and then I upgrade the same Ability? Is the Potion removed or not?

Ruling: The Potion is not removed.

Explanation:

1. When upgrading, place the upgrade on your hero board and simply re-attach the Potion to the same ability.

Location: Discord-Alchemist

Ruling Date: 2/6/2026

2. Interaction Name: Spending Potions

Situation: When exactly are Attached Potions able to be spent?

Ruling: Per the leaflet. See detailed explanation below

Explanation:

1. Whenever you activate an Ability, you may spend any number of Potions that are Attached to that Ability.

[the next two lines are the two examples of abilities that can be activated when Attached Potion[s] can be spent]

2a. Offensive Ability: Spend at the end of the Offensive Roll Phase

- this is further clarified on the back of her leaflet under "Spending Potions"
- this is technically at the end of ORP 4, *with the end of ORP being the very last point of the ORP before play advances to the next Targeting Roll Phase or Defensive Roll Phase.*
- *Per timing rules, the Active Player (the Alchemist) still has the "stick of priority," so they can spend these Unique Status Effects (as spending status effects cannot be interrupted) without the Potion(s) being able to be removed from the card Buh Bye (which removes status effects)*

2b. Defensive Ability: Spend after resolving the effects of your defense

- this is further clarified on the back of her leaflet under "Defensive Ability"
- this is technically at the end of DRP 4, after any "Attach 1 x [6 symbol] Potions" defense roll results have been resolved.
- *Attached Potions follow the exact same logic, but in this case the Alchemist is NOT the Active Player. So after they Attach these Defensive Potions, the Active Player (the Attacker) can beat you with the "stick of priority" and remove a newly Attached Potion gained from her Defense with the card Buh Bye*

Location: Discord-Alchemist

Ruling Date: 2/19/2026 (updated with exact timing example 3/30/2026)

102. Mystic Brawler

WIP

Dice Throne Adventures (DTA)

Errata to Components

Elf-is: Level 4 Minion: Roll Objective on his card is different in two places (one shows “Slash-Slash-Chaos-Chaos”, another shows “Slash-Slash-Slash-Chaos”).

- Officially: use the “Slash-Slash-Slash-Chaos” one
- Feel free to use the “Slash-Slash-Chaos-Chaos” one if you want (it makes the Minion easier as this Roll Objective is harder to activate)

Trench Coat: Common Loot card: Card should have the descriptor “once per turn” to read “Once per turn, when selling a card, gain 2CP instead of 1CP”

1. Interaction Name: Hex

Situation: How does the unique status effect Hex interact in the following situations? (see examples of cards in Explanation below)

Ruling: If your die shows a value of “6”, it is Hexxed / altered to a blank die face. (see below)

Explanation:

1. Hex alters a rolled die to a blank die face with no value.
2. The phrase “rolls a 6” is also meant to include any dice manipulation cards.
 - So Wild changing a die to a 6:
 - *Cannot become a six at all. The six side is considered blank.*
 - **A six rolled (which is blank) can be changed with So Wild**
 - Six It changing a die to a 6:
 - *Cannot become a six at all. The six side is considered blank.*
 - **A six rolled (which is blank) should never have Six It used on it because the die is already a six**
 - Tip It changing a die from 5 to 6:
 - *Cannot become a six at all. The six side is considered blank.*
 - Tip It changing a die from 6 to 5: Die that is a six is already Hexxed into a blank die with no value. You cannot Tip the value of “no value”

UPDATE: Description of Hex has been updated slightly for clarity of use. Description now reads “treat all die faces with a 6 as if they are completely blank instead”.

The outcomes above have been updated (your dice cannot ever become a 6 as they are all considered blank instead)

Location: Discord-DTA

Ruling Date: 10/29/2024 (*updated 2025/04/09*) (**update 2025/09/03**)

2. Interaction Name: Parasite

Situation: When and how exactly do I receive 1dmg during the *Upkeep Phase*?

Ruling: If you have a Positive Status Effect at the end of your *Upkeep Phase*, receive 1 dmg

Explanation:

1. You can choose to resolve the order of effects in the Upkeep Phase in whatever way you want.
2. Therefore, if you have spendable Positive Status Effects that are able to be spent during the Upkeep Phase, you can choose to spend these first, and then do the "check" for Parasite after.

Location: N/A

Ruling Date: 12/18/2024

3. Interaction Name: Action cards and targeting players

Situation: Who exactly can I target with my Action cards and abilities that read "a chosen opponent" or "a chosen player"

Ruling: Any player on the Portal Crawl map.

Explanation:

1. You can target any opponent on any Portal tile during a Portal Crawl scenario with Instant Action cards, Roll Phase Action cards, or Main Phase Action cards.
2. For example, the card "Get That Outta Here!" reads "Remove a status effect token from a chosen player." This player can be either a teammate or an enemy Minion (opponent), and they can be on any Portal Tile.

Location: N/A

Ruling Date: 12/13/2024

4. Interaction Name: Stun and Unique Defenses

Situation: How does Stun work with Unique Defenses? Specifically, the Goblin Horde and Raging Berserker?

Ruling: Unique Defenses do not activate while Minion's are stunned.

Explanation:

1. Per the description for Stun, "No defense may be made, no status effect tokens or passive abilities may be used, etc." and "While you are stunned, you cannot take any actions of any kind. Even if your opponent has an ability, status effect, or card that could prevent an incoming status effect, Stun is inflicted before any damage is dealt".
2. No defense made includes Unique Defenses; therefore, in both cases, they are unable to be activated for both of these Minions

Location: BGG-Questions about stun mechanic in DTA

Ruling Date: 12/18/2024

1. Loot Cards

Card changes:

The Common Loot card Trench Coat: card should read "once per turn" when selling a card for 2CP (older versions do not have the "once per turn" limit).

1. Interaction Name: Pure dmg and successfully activating Loot cards

Situation: Below are 3 situations that came up. They are:

Q1. During a PURE damage attack, can you activate

- a1. Vampire's Scepter or Haunted Helmet
- a2. Demon's Spike Chain or Ghost's Totem
- b1. Brass Knuckles or Broken Sword

- b2. Broken Sword (remove)
- c. Electro Gauntlets
- d. Blazing Effigy, Blinding Amulet or Poison Syringe
- e. Hungering Dagger

Q2. Can you activate Hungering Dagger during your ultimate? If you can, do you still reduce 5 damage?

Q3. When do you consider successfully activate an Equipment card if your Equipment is (random order, not all Equipment listed)

- a. Leather Armor or Full Mythril Jacket
- b. Brass Knuckles or Broken Sword
- c. Fire Snake Immunity
- d. Blazing Effigy, Blinding Amulet or Poison Syringe
- e. Hungering Dagger

Ruling: See below

Explanation:

Q1.

1. Per damage type rules, "Pure Dmg cannot be modified"
2. None of these equipment cards have the key words "Attack Modifier" on them.
3. Some of them likely should have the words "Attack Modifier" on them, (such as Brass Knuckles which reads "add 1/2 dmg to your Attack".
4. the rest are worded better by saying "Offensive Ability, dmg, if you would gain/ inflict status effect, etc", so are not an issue.
5. Hungering Dagger is also questionable, but I believe only Deadpool has a pure dmg Attack that actually deals more than 6 dmg, so they are literally the only Hero who could possibly use this card with a pure dmg Attack.
6. given the above, Brass Knuckles and Broken Sword and Hungering Dagger cannot be activated, but all other noted Equipment cards can be activated during a pure dmg Attack!

Q2.

1. Hungering Dagger reduces your dmg dealt by 5, then lets you Steal 2 Health from a chosen opponent.
2. Per Ultimate rules, "The damage and effects of an Ultimate Ability can be enhanced, but cannot be reduced, prevented, avoided, responded to, or interrupted by anything".
3. Therefore, yes you can activate Hungering Dagger, and it's dmg is not reduced by 5

Q3.

1. All but c would be considered successfully activated when you utilize their effect (extra dmg being added, status effect afflicted, etc)
2. c is a pickle, but I would rule that it is considered successfully activated only when a Poison or Burn is removed from your Hero, and whenever Poison/ Burn is "blocked" by this Equipment card

Ruling Date: 7/14/2026

2. Legacy Components

1. Interaction Name: King's Hand and Vis'eer

Situation: Will the Mad King's King's Hand activate if you target Vis'eer with an Ultimate?

Ruling: Yes

Explanation:

1. King's hand tokens are activated before the targeting roll phase.

Location: Facebook

Ruling Date: 3/7/2022

2. Interaction Name: Collateral dmg and Vis'eer

Situation: Will collateral damage to all opponents hit both Vis'eer and the Mad King?

Ruling: Yes

Explanation:

1. He is immune to everything except dmg. Collateral dmg is dmg.

Location: Facebook

Ruling Date: 3/7/2022

3. Localization

French

Rogue: Rules Clarification: For clarification, the Rules Clarification is if you already have 4 Ionic Energy tokens, you cannot switch a "2-side" token with a gained "1-side" token

Dice Throne Missions (DTM)

1. Interaction Name: Status effects and gaining Momentum

Situation: What happens if you have multiple tokens to be inflicted? Can you inflict some of them and convert the rest to Momentum, or is it one of those “all or nothing” types of scenarios when it comes to inflicting/gaining tokens and gaining Momentum?

Ruling: Can split between both

Explanation:

1. The rulebook does state “when you would place a status effect on a targeted enemy”, meaning that it is per individual status effect.

Here is an exhaustive list of negative status effects that have no effect on Henchmen and should always be converted into Momentum (thanks Jonathan W 👍):

1. Alpha*
2. Barbed Vine
3. Coal*
4. Concussion
5. Constrict
6. Crimson Bands
7. Dice Cube
8. Disruption
9. Entangle
10. Influence*
11. Knockdown
12. Silence
13. Spellbound (Henchmen only)

*asterisk denotes status effects which could still be inflicted as there are some cards or abilities that require these status effects to be inflicted on your opponent.

Location: N/A

Ruling Date: 11/19/2024 (list added 02/26/2025)

2. Interaction Name: Dominance and Range

Situation: What happens if I roll a “1” on Dominance but I do not have any teammates within Melee? Do I have to spend 1 Momentum to gain Range in order to target one of my teammates?

Ruling: Yes

Explanation:

1a. Dominance reads “When a player with this token Attacks, they must roll 1 die:

- On 1, they must choose a teammate to target instead. If they cannot, they must discard 1 card randomly. Then remove this token.

1b. Range reads “To target a non-adjacent enemy with an Attack, you must gain Range.

- You can gain Range by spending Momentum... Gaining Range must be done BEFORE resolving any Attack effects.

1c. Both Dominance and spending Momentum to gain Range occur at the same time, so it is completely valid to still gain Range (to target a non-adjacent enemy) after rolling a 1 for Dominance (which is rolled when the afflicted player Attacks)

2a. The status effect Dominance is effectively an “enemy mind-controlling” a Hero if a 1 is rolled.

2b. While the status effect Dominance does not specifically say “Attack one of your teammate Heroes and treat them as if they are an ****enemy**** (keyword),” rolling a 1 does mean that a Dominated Hero should now be forced to Attack a teammate, as they “think” that their teammate is an ****enemy****

2c. If a Hero is unable to gain Range (i.e. they do not have 1 Momentum), then you must perform the discard 1 card randomly effect instead

3. Here is a helpful example breakdown I edited and updated from Jonathan W:

- you’re adjacent to the Boss, but not adjacent to any teammates.
- you activate an Attack, which does not require Range, so you don’t spend any Momentum for Range because you do not have to (in Melee).
- you then roll for the Dominance check, and roll a 1.
- you remove Dominance and attempt to retarget.
- at this point,
 - a) if you are standing next to a teammate Hero, you Attack them with your activated Attack
 - b) if you are not standing next to a teammate Hero, you would have to spend a Momentum to gain Range to try and target one of your teammate Heroes instead.
 - c) if you cannot gain Range (i.e. you do not have 1 Momentum), your Melee Attack has no valid targets, so the Attack fizzles and has no effect. It does not target the Boss, and you do not gain any benefits from the Attack (i.e. gain status effect X token) and must discard 1 card randomly (which is the other effect of Dominance if a teammate cannot be targeted)

Conclusion: Try not to get mind controlled and get Attacked by your teammates!

A final note, you must still roll for Dominance if you successfully Activate your Ultimate Ability. The reason is, Dominance does not prevent or affect or alter your Ultimate in any way, and rolling for Dominance is not an action that is performed by an opponent player. It simply affects WHO is on the receiving end of the Ultimate Ability. :)

Ruling Date: 2/3/2025

3. Interaction Name: Resolving additional Roll Phases

Situation: When should a Hero resolve abilities or effects that grant additional Roll Phases?

Such as a Barbarian inflicting Stun, or the Tactician’s Profiteer Ability, etc

Ruling: Resolve during that Heroes Roll Phase resolution

Explanation:

1. In Marvel Dice Throne Missions, all Heroes simultaneously perform their Roll Phase up until they are ready to Attack.

2. As these abilities are resolved in turn order, if a Hero has a status effect or ability that grants an additional Roll Phase, this new Roll Phase should be resolved now, with that Hero performing their Roll Attempts and activating another Offensive Ability.

3. See the section “3. Advanced Concepts >> Performing Multiple Roll Phases in one turn” for how to resolve multiple Roll Phases. Additionally, the section “1. General Concepts >> Status Effects” gives a comprehensive example of when exactly status effects should be removed.

Location: N/A

Ruling Date: 2/3/2024 (updated 2025/09/22)

Range

Here is a better example of how Melee and Range works with abilities.

Playing as a Monk. You do not have any adjacent enemies. What happens if I try to activate:

1. Meditate: Can activate normally. You do not need Range. Monk will gain 5 Chi and an Evasive or Cleanse
2. Fist of Harmony: (Offensive Ability that deals 6 dmg and gain 2 Chi) Cannot activate at all unless you spend 1 Momentum to gain Range.
 - a. This means that you cannot simply just "activate it" and deal 6 dmg to nothing while also gaining 2 Chi.
 - b. If you can spend 1 Momentum to gain Range, and if there are any other enemies on the Map, the Monk can Attack them for the 6 dmg and then gain 2 Chi.
 - c. If you can spend 1 Momentum to gain Range, and if there are no longer any enemies on the Map, the Monk will then gain 2 Chi (and the 6 dmg will do nothing)

Allies

The Vision: You can Heal 6 if you remove 3 Positive Status Effects with the +EXHAUST effect.

Professor X: When exhausting him, does professor X stop other Attack effects (like the rolling of 1 die in the Magneto Mission)?

Spend 3 (not exhausting Professor X):

- The 12 dmg Attack's target would change to a different henchman (or no target).
- You would still roll 1 die and on a Vortex, would add a Plot Token to the Generator

Spend 2 (exhausting Professor X):

- All dmg from the 12 dmg Attack which is directed at you is prevented.
- Ignore all effects would include the rolling 1 die to add a Plot Token.
- The "applies only to you" simply means that if you had a teammate, they would still receive the 12 dmg Attack and still roll 1 die to add a Plot Token to the Generator.

Note that these two effects are different and distinct (one redirects an Attack, one prevents all dmg from an Attack)

Ruling Date: 4/17/2025

Boost Tiles

Interaction Name: Face-down Boost Tiles

Situation: When exactly do you flip over/ resolve previously gained face-down Boost Dials that are on your Health Dial?

Ruling: After resolving a Boss' dice, whether they activate an Attack or not.

Explanation:

1. Per page 10 under the "Enemy Roll Phase (Boss)" section, "All Heroes reveal face-down Boost Tiles on their Health Dial" is main bullet point #4.
2. This bullet point has nothing to do with whether a Boss whiffs or successfully activates an Attack.

Looking at the main points of this section, it should be resolved as follows:

1. Alter dice → 2. place Boost Tiles on red die spaces → 3. compare dice to available Attacks → 4. reveal face-down Boost Tiles on your Health Dial.
 3. This gives face-down Boost Tiles removal a clear and consistent time to be removed. Also kind of thematic, as the only way to NOT get a guaranteed- Crit, is to whiff the Boss.
- Also note: Any just-now-placed face-down Boost tiles cannot be collected or until the next round, after a Hero has picked them up and placed them on their Health Dial

Ruling Date: 3/25/2025

Status Effects

Interaction Name: Heroes inflicting Hex (the Raveness)

Situation: What happens when I inflict Hex on a henchman? Or on a Boss?

Ruling: The status effect lasts for 1 enemy Attack, then is removed.

Explanation:

1. Per page 7 under the "Round Phases - Status Effect Clarifications" section, "
 2. 6-sided dice are considered blank for only the enemy(ies) that are afflicted with Hex.
 3. Hex's effect works for the first Roll Phase against Hero 1, then is removed.
- this is a slightly weird interaction, but there are like 100 status effects, so there is a bit of wonkiness with a few of them.
- Note for Crisis Abilities, that this a completely separate Phase and all Hex's would be removed from all henchmen/ bosses by this point in time.

In conclusion, on side 1, Hex stops an individual henchmen from activating their Attack against 1 Hero, but the rest of that type still activate. On side 2, Hex works in a similar way to Spellbound where it effectively stops all abilities that require 6s in their roll type.

Ruling Date: 11/5/2025

Missions-Specific

Doc Ock

The Doc Ock Missions explicitly reads "Tutorial Mission" at the top of side 1.

I have gone through and reviewed the rules, and while there is **no rule stating that you cannot increase this Tutorial Missions difficulty level**, I will just strongly recommend that you **do not increase this Tutorial Missions difficulty level**.

- This Tutorial Mission was made to be very easy to beat, and even after increasing the difficulty it is still very easy to beat.

- If you want to play this level 20 times, increasing its difficulty each time, just to get a full perk sheet, I would say all the power to you!

The one thing I can 100% confirm is that I ****will not**** come to your house to try and stop you from increasing this Missions difficulty level :)

Sauron

Interaction Name: The Great Tree (Sauron Mission)

Situation: a) is the Great Tree considered an enemy for the purposes of player count (for example, Santa's Festivities Offensive Ability deals 1 additional damage per player)

b) Can you perform the typical "convert a status effect to Momentum" if you are Attacking and trying to inflict a status effect on the Great Tree?

Ruling: a) Yes b) No

Explanation:

1a. The Great Tree is a special enemy in this Mission. It has a bunch of Health tokens and does not Attack, but it still fits the definition of both an enemy and opponent (see text in blue).

2a. A further point of clarification is that you could play a card or ability that reads "deal X dmg to a chosen player" and you could certainly choose the Great Tree.

1b. (see text in Yellow) You can only convert inflicted status effects into Momentum by choosing ****not**** to place it on an enemy. If you cannot inflict the status effect on an enemy in the first place, then you cannot gain any Momentum.

2b. A further example clarification would be if a hero had some ability similar to "all enemies are inflicted with [status effect]. An Unstoppable Threat is an enemy (text in blue), but they may never receive damage or status effects (placed on them), meaning that you cannot convert this example ability's status effect on it in the first place, and cannot convert it to Momentum.

3b. (see text in yellow) The word "immune" is not a reference to the Great Tree being "immune to everything except damage." The portion about "this is helpful if the enemy is immune to that status" is a reference to the earlier rulebook points 3 and 4; for example, since enemies cannot have their number of Roll Attempts adjusted, they are "immune" to the Moon Elf's Entangle (which forces a player to perform one fewer Roll Attempt)

Update Bonus Fact: Thor cannot Throw Mjolnir at the Great Tree (since the Great Tree is immune to everything except dmg, which includes Mjolnir being placed on the Great Tree)

Location: Discord- dice throne missions

Ruling Date: 3/31/2025 (update 2025/09/30)
